RS-TR979 MECHANISM SERIES (AR-1)

SPECIFICATIONS

■ CASSETTE DECK SECTION

Deck system	Stereo cassette deck
Track system	4-track, 2-channel
Recording system	AC bias
Bias frequency	80 kHz
Erasing system	AC erase
Heads	
DECK 1	Playback head (Permalloy) × 1
DECK 2	Recording/Playback head (Permalloy) × 1 Erasing head (Double-gap ferrite) × 1
Motors	
DECK 1	Capstan/reel table drive (DC servo motor) × 1 Reel table drive (DC motor) × 1
DECK 2	Capstan/reel table drive (DC servo motor) × 1 Reel table drive (DC motor) × 1
Tape speed	4.8 cm/sec. (1-7/8 ips)
Wow and flutter	
For (PP) area	0.1 % (WRMS)
For others	0.07 % (WRMS) ± 0.2 % (DIN)
Fast forward and rewind times	Approx. 45 seconds with C-60 cassette tape
Frequency response (Dolby NR off)	
NORMAL	40 Hz - 15 kHz ± 3 dB
For (PP) area	20 Hz - 17 kHz
For others	20 Hz - 16 kHz (DIN)
CrO ₂	40 Hz - 15 kHz ± 3 dB
For (PP) area	20 Hz - 17 kHz
For others	20 Hz - 16 kHz (DIN)

METAL	40 Hz - 16 kHz ± 3 dB
For (PP) area	20 Hz - 18 kHz
For others	20 Hz - 17 kHz (DIN)
S/N (Signal level = max recording level, CrO ₂ type tape)	
NR off	56 dB (A weighted)
Dolby B NR on	66 dB (A weighted)
Dolby C NR on	74 dB (A weighted)
Input sensitivity and impedance	
REC (IN)	100 mV/47 kΩ
Output voltage and impedance	
PLAY (OUT)	500 mV/500 Ω
HEADPHONES	37.5 mV/(8 Ω) (Load impedance 8 Ω - 600 Ω)

■ GENERAL

Power consumption	25 W
Power supply	
For (PP) area	AC 60 Hz, 120 V
For (GC) area	AC 50/60 Hz, 110 V/127 V/220 V/240 V
For others	AC 50/60 Hz, 230 V - 240 V
Dimensions (W × H × D)	430 × 135 × 280 mm (16-15/16" × 5-5/16" × 11-1/32")
Weight	4.9 kg (10.8 lb.)

Note:

Specifications are subject to change without notice.
Weight and dimensions are approximate.

SCHEMATIC DIAGRAM	28~40	RESISTORS AND CAPACITORS	61~63

■ SAFETY PRECAUTION (This "safety precaution" is applied only in U.S.A.)

1. Before servicing, unplug the power cord to prevent an electric shock.
2. When replacing parts, use only manufacturer's recommended components for safety.
3. Check the condition of the power cord. Replace if wear or damage is evident.
4. After servicing, be sure to restore the lead dress, insulation barriers, insulation papers, shields, etc.
5. Before returning the serviced equipment to the customer, be sure to make the following insulation resistance test to prevent the customer from being exposed to a shock hazard.

• INSULATION RESISTANCE TEST

1. Unplug the power cord and short the two prongs of the plug with a jumper wire.
2. Turn on the power switch.
3. Measure the resistance value with ohmmeter between the jumpered AC plug and each exposed metal cabinet part, such as screwheads antenna, control shafts, handle brackets, etc. Equipment with antenna terminals should read between $3\text{M}\Omega$ and $5.2\text{M}\Omega$ to all exposed parts (Fig. A). Equipment without antenna terminals should read approximately infinity to all exposed parts (Fig. B).

Note: Some exposed parts may be isolated from the chassis by design. These will read infinity.

(Fig. A)

Resistance = $3\text{M}\Omega$ - $5.2\text{M}\Omega$

(Fig. B)

Resistance = Approx. ∞

4. If the measurement is outside the specified limits, there is a possibility of a shock hazard. The equipment should be repaired and rechecked before it is returned to the customer.

ACCESSORIES

AC power supply cord
 [(RJA0019-2K) ... (EG, GC)]
 [(SJA172) ... (PP)]
 [(SJA173) ... (GN)]
 [(VJA0733) ... (EB)]

... 1 pc.

Stereo connection cables
 (SJP2249-3) 2 pcs.

Stereo mini cables
 (SJP2257T) 2 pcs.

Power plug adaptor
 (SJP5213-2) 1 pc.
 (For GC area only)

CONNECTIONS

Before making connections, be sure that the power to this unit and all other system components is turned off first.
 See the operating instructions of the receiver (or amplifier) and the compact disc player for details.

Make connections in the numbered sequence by using the cables.

Note:

Avoid letting the cables touch each other as much as possible, otherwise noise will be generated.

The following functions can be operated by remote control (When connected to the appropriate Technics receiver): Playback, Stop, Pause, Rewind/fast-forward search, Record, and 1-2 (A-B) deck selection.

The REMOTE CONTROL "OUT" terminal is provided to connect a Technics Compact Disc Player or Graphic Equalizer.

The REMOTE CONTROL and SYNCHRO EDIT terminals can only be used with selected Technics Components. Please contact your dealer for details.

"AC OUTLET" (UNSWITCHED: PP area only)

Power is always available, regardless of the unit's power switch setting.

Audio equipment rated up to 100 W can be connected.

LOCATION OF CONTROL

Control section

Controls common to both tape decks

- ① **Power “ ⏻ STANDBY/ON” switch (POWER, ⏻ STANDBY/ON)**
- ② **Dolby noise-reduction button (DOLBY NR)**
This button is used to reduce the hissing noise heard from the tape. This unit is provided with both the B-type and C-type noise-reduction systems.
- ③ **Recording-balance control (BALANCE)**
This control is used to balance the left and right sound levels during recording.
- ④ **Recording-level control (REC LEVEL)**
This control is used to regulate the recording level.
- ⑤ **Bias-adjustment control (BIAS ADJUST)**
This control is used to equalize the frequency response during recording.
- ⑥ **Reverse-mode selector (REVERSE MODE)**
This selector is used for selection of the reverse mode (for either playback or recording).
- ⑦ **Headphones jack (PHONES)**
- ⑧ **Synchro-start button (SYNCHRO START)**
This button is used to start a tape-to-tape recording, simultaneously starting deck 1 (the playback deck) and deck 2 (the recording deck).
- ⑨ **Tape-to-tape recording-speed button (SPEED)**
This button is used to select the recording speed during tape-to-tape recording.
- ⑩ **Timer switch (⏰ TIMER)**
This switch is used to automatically begin a tape recording or tape playback at a certain time, selected by an optional timer.

Control section

(continued)

Controls applicable to tape deck 1 and/or 2

- ⑪ **Cassette holder**
- ⑫ **ATC button (ATC)**
This button is used to perform ATC (auto tape calibration). (See page 6.)

**13 Tape counter buttons
(COUNTER 1/COUNTER 2)**

MODE: This button is used to select the tape/linear counter indication.

RESET: This button is used to reset the tape counter indication to "000_" / "00.00".

**14 Automatic-record-muting button
(● AUTO REC MUTE)**

This button is used to make a silent interval on the tape while recording is in progress.

15 Record button (● REC)

This button is used to set deck to the recording stand-by mode.

16 Reverse-side playback button (◀)

This button is used to start the playback or recording of side "B" of the cassette.

(The tape will move in the right-to-left direction.)

17 Stop button (■)

This button is used to stop the tape movement.

18 Forward-side playback button (▶)

This button is used to start the playback or recording of side "A" of the cassette.

(The tape will move in the left-to-right direction.)

19 Open/close button (▲ OPEN/CLOSE)

This button is used to open or close the cassette holder.

**20 Rewind/fast-forward search buttons
(◀◀/▶▶ TPS)**

These buttons are used to advance or rewind the tape, or to easily and quickly search for the program's beginning of the tape.

21 Pause button (||)

This button is used to temporarily stop the tape playback or recording.

Display section

22 High-speed rewind/fast-forward search indicator (H)

Illuminates during high-speed rewind/fast-forward or high-speed search.

23 Tape counter/ATC display

Normally functions as the tape/linear counter display. During ATC (auto tape calibration), displays the status of the ATC operation.

24 ATC memory indicator (M)

Flashes during ATC (auto tape calibration), and then remains illuminated when the ATC operation is completed.

25 ATC graphic display

Shows a graphic display of the ATC (auto tape calibration) operation.

**26 Tape-to-tape recording-speed indicators
(×1, ×2)**

One of these indicators illuminates to show which of the tape-to-tape recording speeds was selected by pressing the tape-to-tape recording-speed button.

27 Recording indicator (REC)

Illuminates to indicate that this unit is in the recording stand-by mode or is recording.

28 Remote-control indicator (R.C.)

Illuminates to indicate that this unit can now be controlled by the remote control transmitter of the appropriate receiver connected.

29 Reverse-side indicator (<)

Illuminates during playback or recording to indicate that side "B" of the tape is being used.

30 Dolby noise-reduction indicators (B, C)

Each indicator illuminates to show the type of Dolby noise-reduction system selected by pressing the Dolby noise-reduction button.

31 Forward-side indicator (>)

Illuminates during playback or recording to indicate that side "A" of the tape is being used.

32 Playback indicator (PLAY)

When this indicator illuminates steadily, it indicates that this unit is in the playback or recording mode.

When flashing, indicates that this unit is in the pause mode or in the recording stand-by mode.

33 Input level meter

During playback, this meter indicates the level of the recorded sound.

During recording, it indicates the level being recorded, adjusted by the recording-level control.

34 Reverse-mode indicators (L, C, R)

Each indicator illuminates to show which of the reverse modes was selected by the reverse-mode selector.

■ ABOUT THE ATC FUNCTION

ATC (auto tape calibration) is the function which identifies the quality of the tape (concerning bias, level, equalizer) automatically and sets the most desirable recording condition. It takes about 1 minute to complete the setting.

ATC will begin when the ATC button on the deck in which the cassette for recording is inserted is pressed.

Perform ATC while the other deck is in the stop (or rewind/fast-forward) mode.

Because the ATC function records a test signal onto the tape, any previously recorded material will be erased, so be careful not to accidentally erase material which you wish to save.

Although ATC can also be performed for a tape which is partly wound, it is not possible at the end of the tape. Although the tape will be wound back to its original position after ATC has been completed, the position may be slightly different from the exact original position. Therefore, perform ATC 2 seconds or more after the end of the previous track.

Be sure to set the bias adjustment control to 0.

The display changes as follows while the ATC setting is taking place.

Example: Performing ATC on tape deck 2.

① Press the ATC button.

② Bias setting in progress.

③ Equalizer setting in progress.

④ Level setting in progress.

⑤ ATC completed.

"M" indicator illuminates.

If the leader tape (attached to each end of recording tape) is reached during the above setting operations, the "M" indicator will rapidly flash on and off to indicate that ATC is not possible. Wind the tape to a position from which ATC can be performed and press the ATC button once again.

To cancel the ATC function while the settings are in progress:

Press the stop button.

To cancel the ATC settings after they have been made:

Press the ATC button. (The settings cannot be cancelled during recording.)

Notes:

ATC may not be possible on an old tape or on some special types of tapes.

The settings will be cancelled if the open/close button is pressed, so do not remove the tape cassette until recording has been completed.

Unless the ATC settings are cancelled, they will be stored in memory even after the power has been switched to the standby condition (or the AC power supply cord has been disconnected from the AC outlet).

DISASSEMBLY INSTRUCTIONS

"ATTENTION SERVICER"

Some chassis components may have sharp edges. Be careful when disassembling and servicing.

Ref.No. 1	Removal of the cabinet	Ref.No. 2	Removal of the motor control P.C.B.
Procedure 1		Procedure 1 → 2	
	 <p>• Remove the 6 screws(❶ ~ ❺).</p>

Ref.No. 17	How to check the main P.C.B.
Procedure 1 → 17	<ul style="list-style-type: none"> When checking the soldered surfaces of main P.C.B. and replacing the parts, do as show.

1. Remove the 3 screws(① ~ ③).

4. Remove the 6 screws(⑨ ~ ⑭).

2. Remove the 5 screws(④ ~ ⑧).

3. Remove the front panel ass'y in the direction of arrow.

5. Remove the bottom chassis ass'y.

6. Reinstall the front panel to the main P.C.B.

■ HOW TO CHECK THE MOTOR CONTROL P.C.B.

- For troubleshooting described on page 17~20, check the unit by using connectors as shown below.

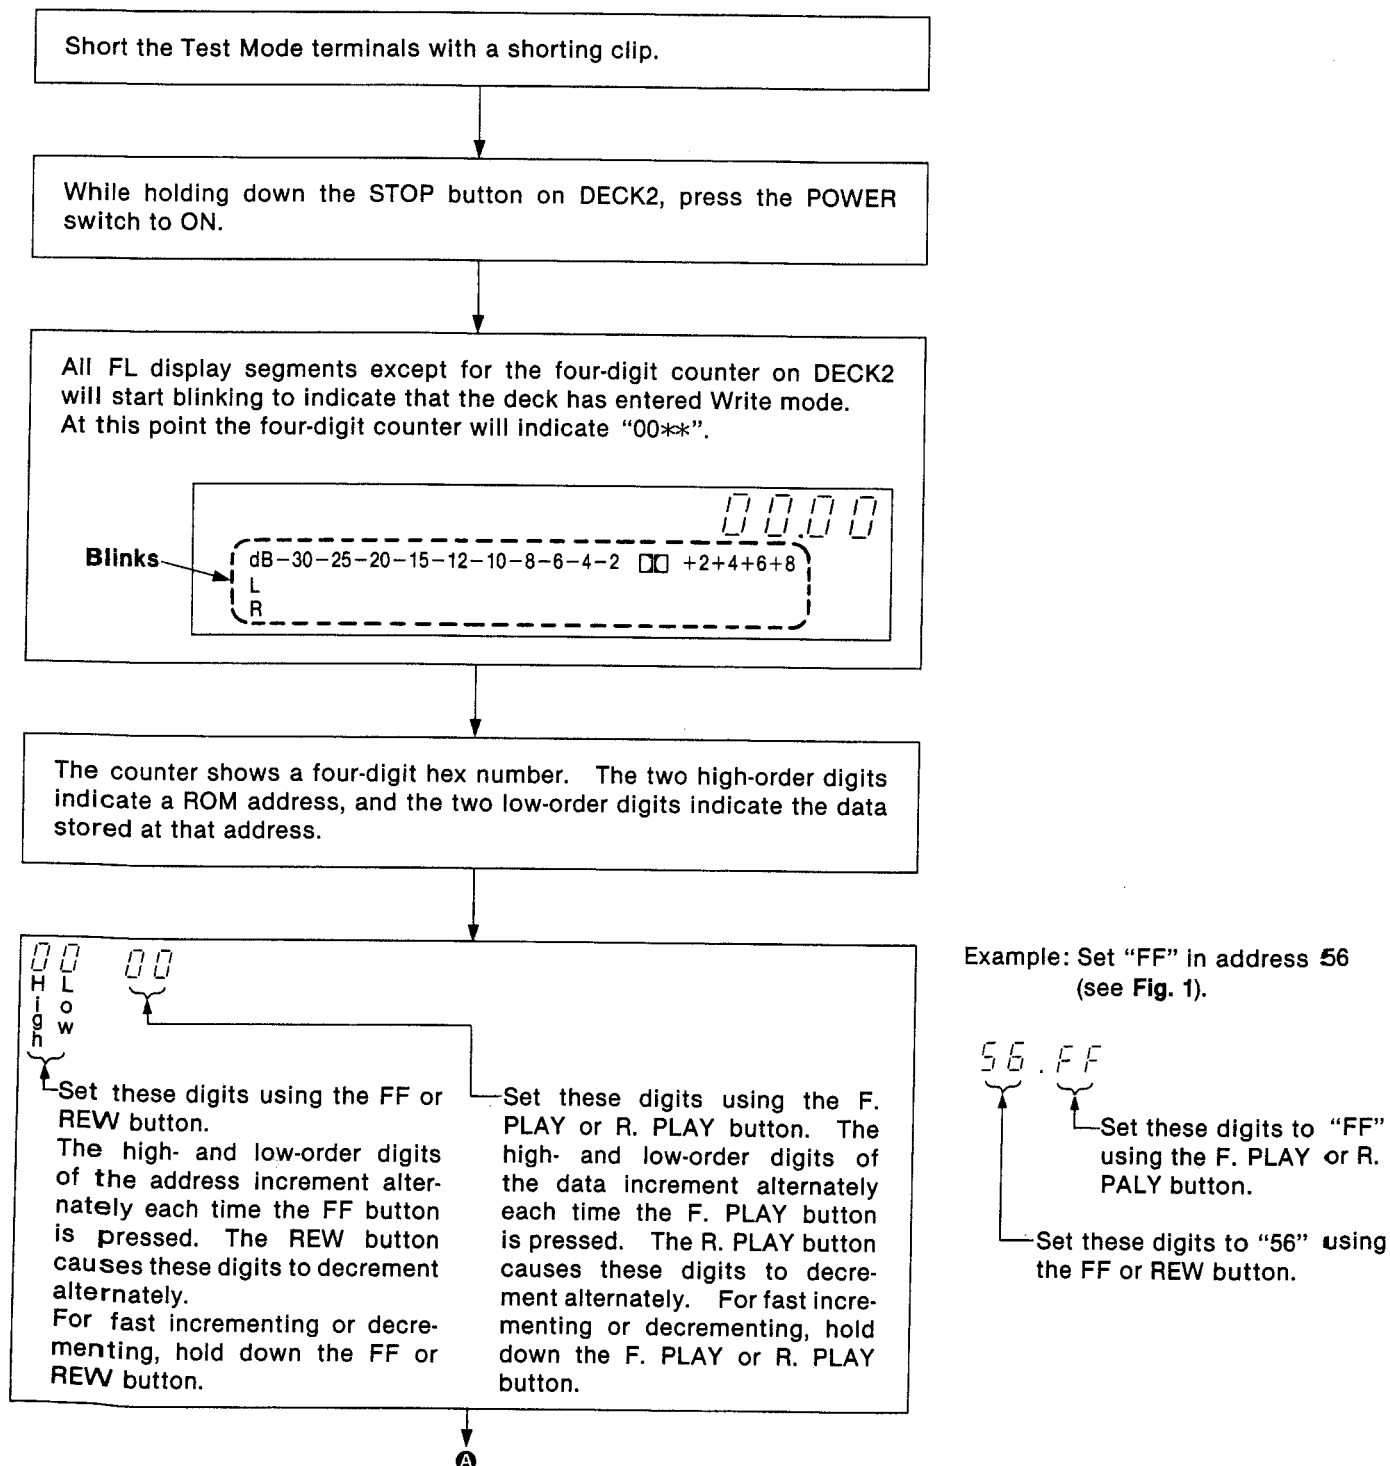

■ ADJUSTMENT PROCEDURE

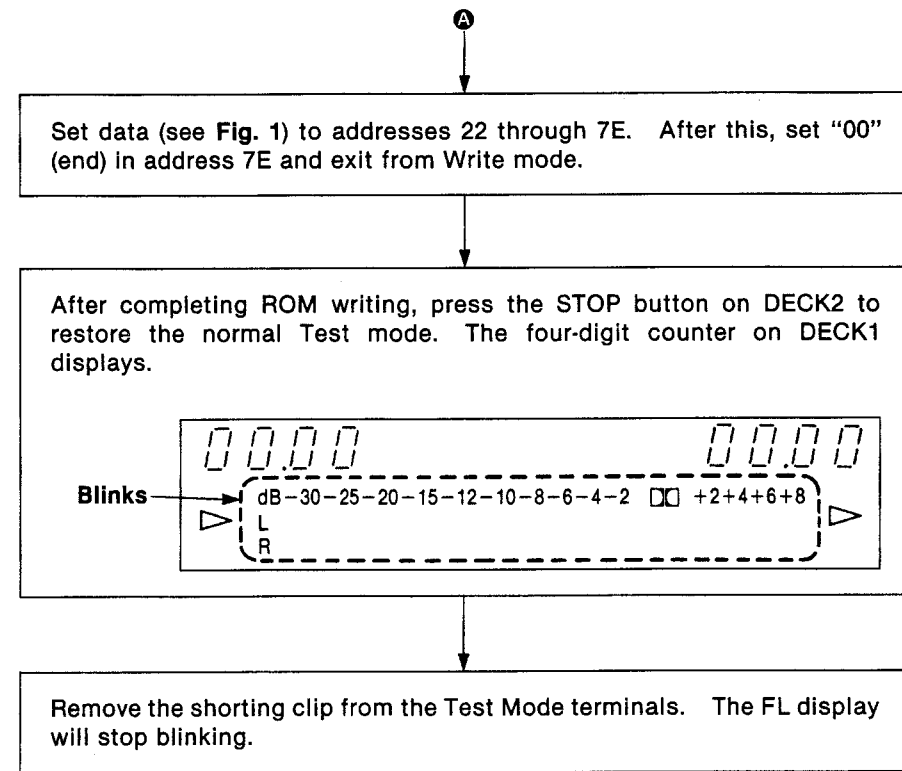

This unit holds recording bias and equalization data in its EEPROM chip. An internal CPU automatically adjusts playback gain, recording bias, overall gain, and overall frequency response according to the ROM data. Manual adjustment with potentiometers is no longer necessary except for head azimuth and tape speed. All other items require only measurement data checks.

The adjustment and checkout procedures are as follows.

• Writing to EEPROM

The EEPROM chip holds the optimal recording bias and equalization data. If the chip has been replaced, be sure to write to it, following the steps below:

High Low	0	1	2	3	4	5	6	7
0	—	—	—	—	B0	68	30	88
1	—	—	—	—	00	78	68	68
2	—	—	D0	68	—	38	B0	FF
3	—	—	80	78	—	64	6C	B0
4	—	—	E0	38	—	A8	FF	C4
5	—	—	7C	64	—	50	A0	1C
6	—	—	FB	A8	80	FF	BA	68
7	—	—	F5	00	58	74	2C	78
8	—	—	0F	—	18	B8	—	50
9	—	—	2B	—	80	30	—	72
A	—	—	12	—	88	—	—	4A
B	—	—	07	—	96	—	—	55
C	—	—	—	84	—	—	80	—
D	—	—	—	60	—	—	58	—
E	—	—	—	30	—	84	18	00
F	—	—	—	68	—	60	80	—

Fig. 1

MEASUREMENTS AND ADJUSTMENTS

Measurement Condition

- Rec. level control; Maximum
- Timer switch; Off
- Recording-balance control; Center
- Bias-adjustment control; Center
- Reverse-mode selector switch; \rightleftharpoons
- Tape-to-tape recording-speed switch; Off
- Dolby NR switch; Off
- ATC switch; Off

- Make sure heads are clean
- Make sure capstan and pressure roller are clean
- Judgeable room temperature $20 \pm 5^\circ\text{C}$ ($68 \pm 9^\circ\text{F}$)

Measuring instrument

- EVM (Electronic Voltmeter)
- Oscilloscope
- Digital frequency counter
- AF oscillator

- ATT (Attenuator)
- DC voltmeter
- Resistor (600Ω)

Test tape

- Head azimuth adjustment (8kHz, -20dB); QZZCFM
- Tape speed adjustment (3kHz, -10dB); QZZCWAT
- Playback frequency response (315Hz, 12.5kHz, 10kHz, 8kHz, 4kHz, 1kHz, 250Hz, 125Hz, 63Hz, -20dB); QZZCFM

- Playback gain adjustment (315Hz, 0dB); QZZCFM
- Overall gain adjustment and Overall frequency response Normal reference blank tape; QZZCRA
- CrO₂ reference blank tape; QZZCRX
- Metal reference blank tape; QZZCRZ

Adjustment Points

HEAD AZIMUTH ADJUSTMENT (DECK 1/2)

1. Playback the azimuth adjustment portion (8kHz, -20dB) of the test tape (QZZCFM). Vary the azimuth adjusting screw until the output of the R-CH are maximized.
2. Perform the same adjustment in the play mode.
3. Repeat the same check in reverse play mode.
4. After the adjustment, apply screwlock to the azimuth adjusting screw.

Fig. 1

Fig. 2

TAPE SPEED ADJUSTMENT (DECK 1/2)

Normal speed

1. Playback the middle portion of the test tape (QZZCWAT).
2. Adjust Deck 1=VR3 and Deck 2=VR2 so that the output is within the standard value.

Standard value: 3000 ± 15 Hz (NORMAL speed)

High speed [Set the unit to forward (FWD) mode.]

3. Press the tape-to-tape recording-speed selector switch (X2) button. This will set the high speed mode.
4. Playback the middle portion on the test tape (QZZCWAT).
5. At that time, check if the output from DECK 1 is within the standard value.

Standard value: 6000 ± 600 Hz (HIGH speed)

6. Adjust VR1 so that the output frequency of DECK 2 is within ± 30 Hz for the value of the output frequency of DECK 1.

Fig. 3

PLAYBACK GAIN ADJUSTMENT (DECK 1/2)

1. Set the AF oscillator's output frequency to 315Hz.
2. With no tape loaded in the deck, press and hold the REC button on DECK2. Adjust the test signal level using the Rec. Level and Balance controls until the line output levels on both channels are 320mV. When the adjustment is complete, release the REC button. (The deck stores the data at the moment the REC button is released.)
3. Load the test tape (QZZCFM) into the deck and locate the part where the playback gain test tone (315Hz, 0dB) is recorded. Press the ATC button, then the FWD PLAY button. (At this point the deck automatically adjusts the playback gains on both forward and reverse sides.) After this, play back the tape and verify that the output level falls in the specified range.
4. Perform the adjustment described in step 3 above for both DECK1 and DECK2.

Standard value: $320\text{mV} \pm 0.5\text{dB}$

Fig. 4

PLAYBACK FREQUENCY RESPONSE (DECK 1/2)

1. Playback the frequency response portion (315Hz, 12.5kHz~63Hz, -20dB) of the test tape (QZZCFM).
2. Assure that the frequency response is within the range shown in Fig. 6 for both L-CH and R-CH.

Fig. 5

Fig. 6

ERASE CURRENT ADJUSTMENT (DECK 2)

1. Insert the Metal blank test tape (QZZCRZ) and set the unit to the Record Pause mode.
2. Check if the output at this time between the erase current confirmation point output TP301 and GND (chassis) (the output on both edges of R308) is within the standard value.

Standard value: 180 ± 20 mA (Metal)...EVM Reading: 180 ± 20 mV

Fig. 7

OVERALL GAIN ADJUSTMENT AND OVERALL FREQUENCY RESPONSE (DECK 2)

1. Load a Normal blank test tape (QZZCRA) into the deck under test. Press the ATC button, then the REC button. (At this point the deck automatically adjusts the overall gain and frequency response.)
2. With the deck placed in Record. Pause mode, apply the reference test signal (1kHz) to the Rec. input and adjust the output level to 320mV with the attenuator (ATT). After this, start recording.
3. While playing back the reference signal just recorded, verify that the output level falls in the following range.

Standard value: $320\text{mV} \pm 0.5\text{dB}$

Normal Overall frequency response chart (NR OUT)

Fig. 8

CrO₂ Metal Overall frequency response chart (NR OUT)

Fig. 9

4. Apply test signals (with the specified test frequencies covering the range from 50Hz to 10kHz) whose levels are 20dB lower than the reference signal level (1 kHz) to the Rec. input and record these signals in sequence.
5. Play back the test signals just recorded and verify that the levels at the test frequencies fall in the ranges specified in Fig. 8 with respect to the reference signal level.
6. Repeat steps 4 and 5 above for CrO₂ blank test tape (QZZCRX) and Metal blank test tape (QZZCRZ), in these cases raising the upper end of the test signal frequency range to 12.5kHz. Verify that the signal levels at the test frequencies fall in the ranges specified in Fig. 9 with respect to the reference signal level.
7. Steps 1 through 4 above are concerned with overall gain; steps 5 through 7 pertain to overall frequency response.

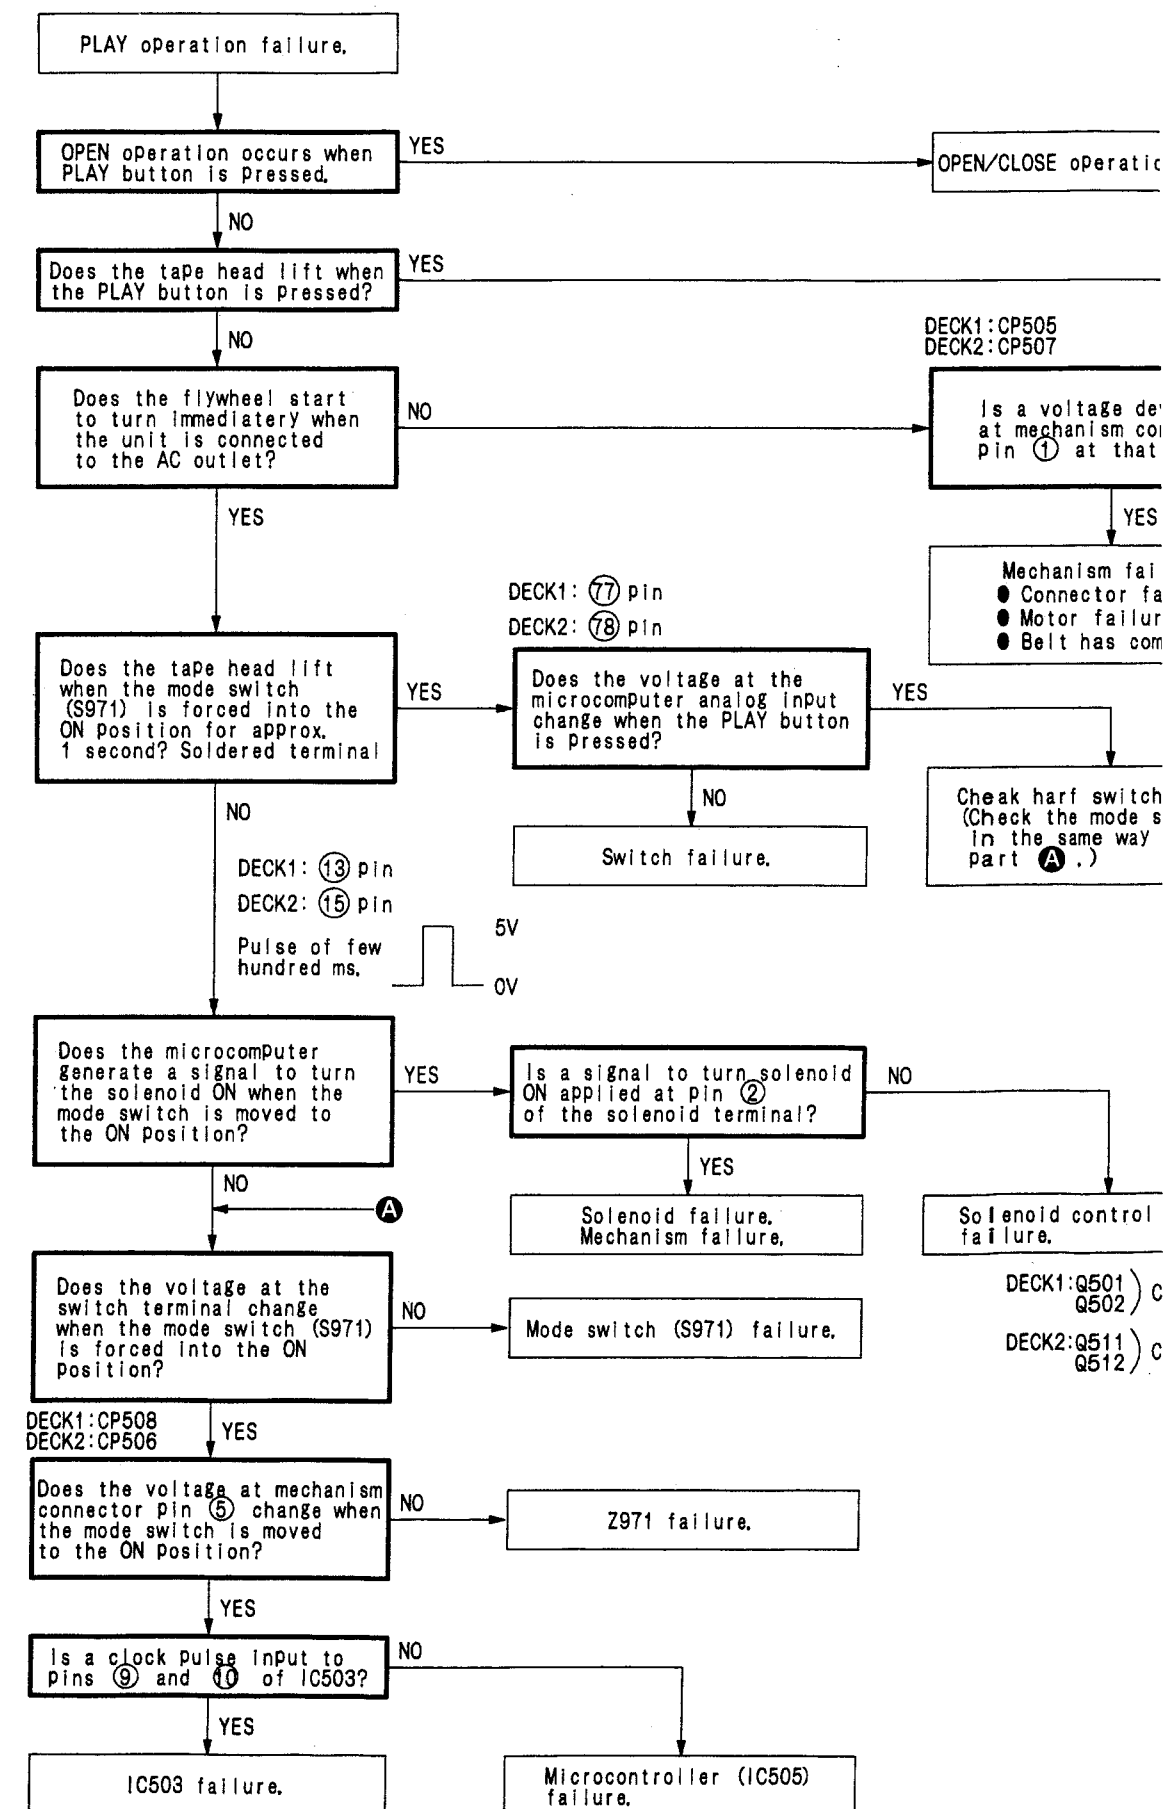

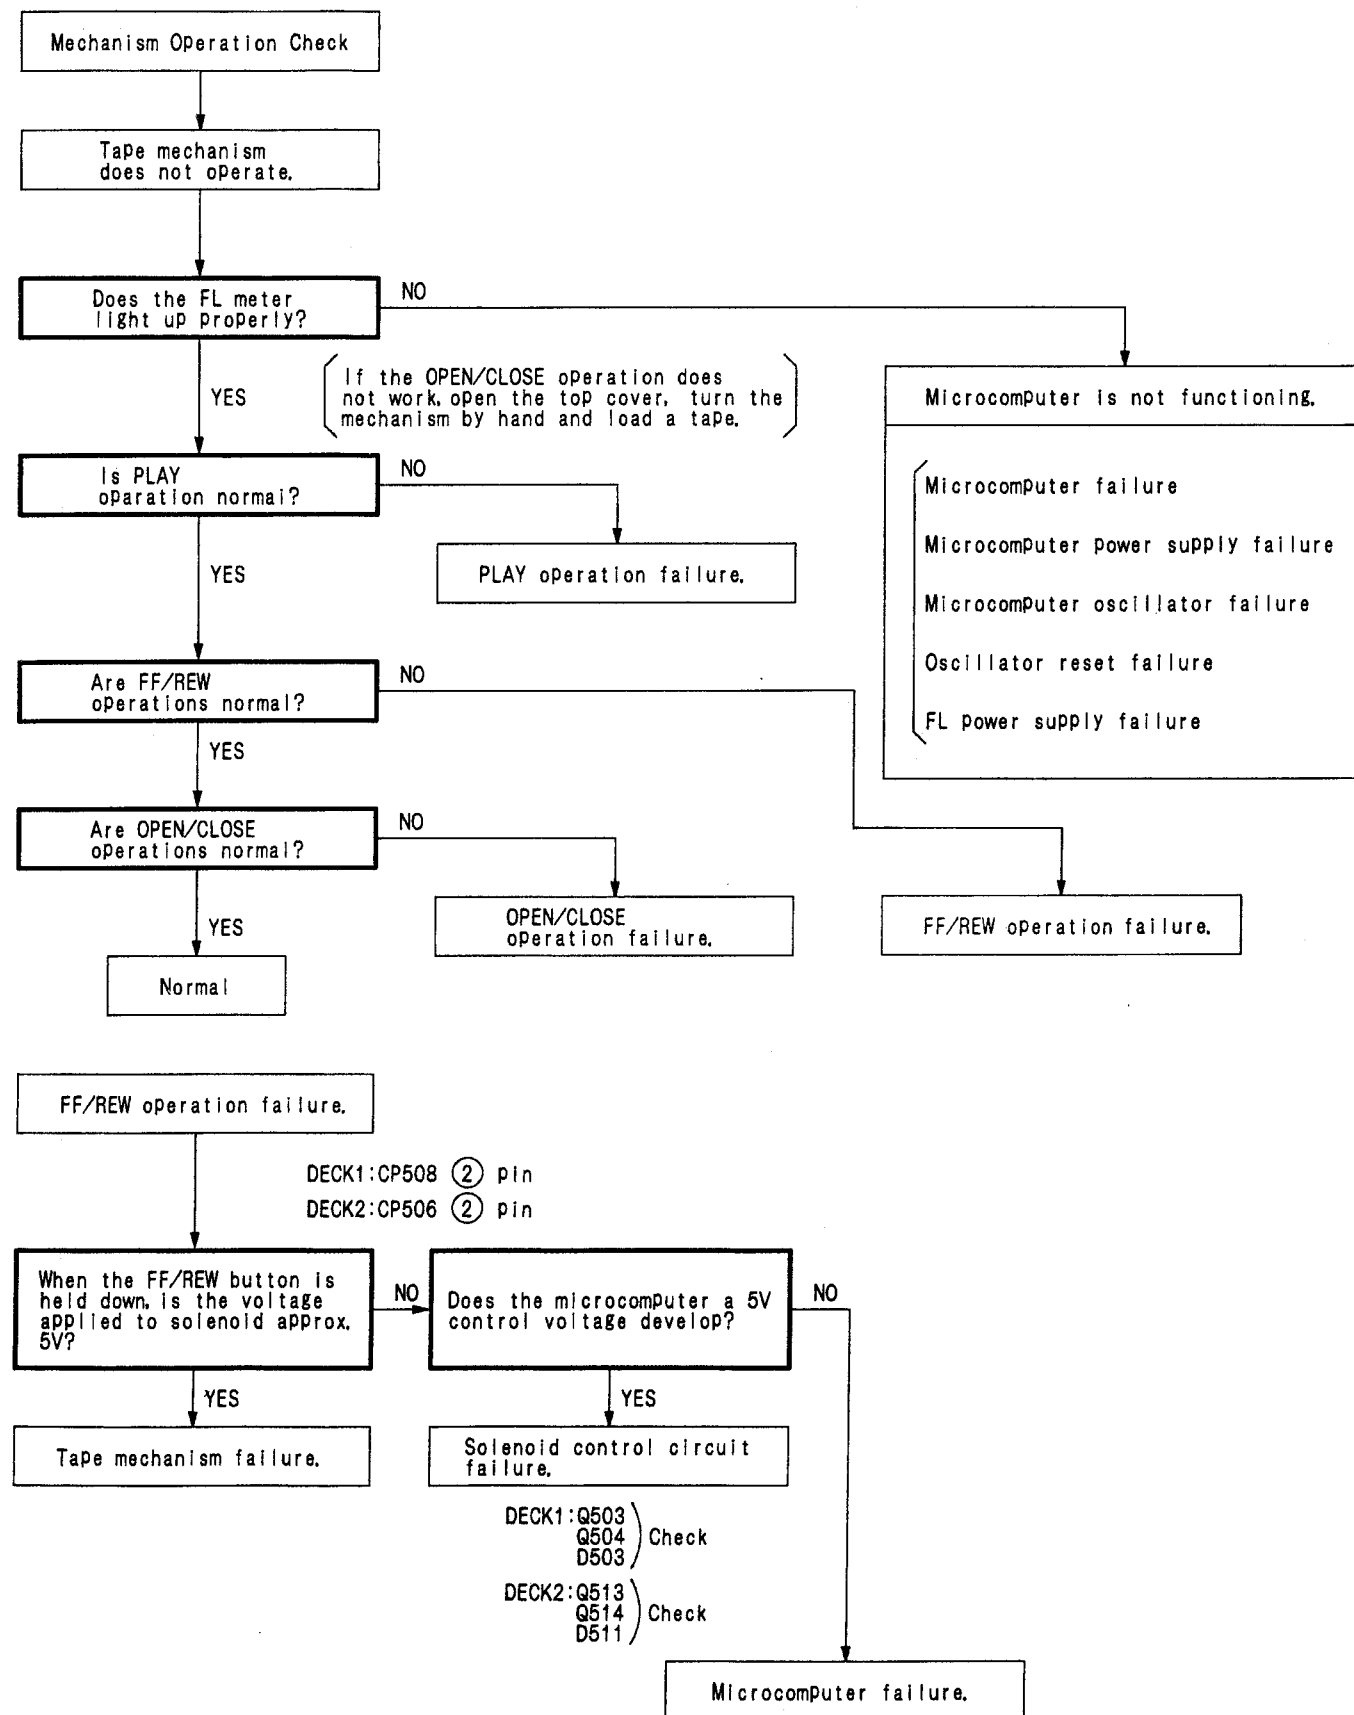

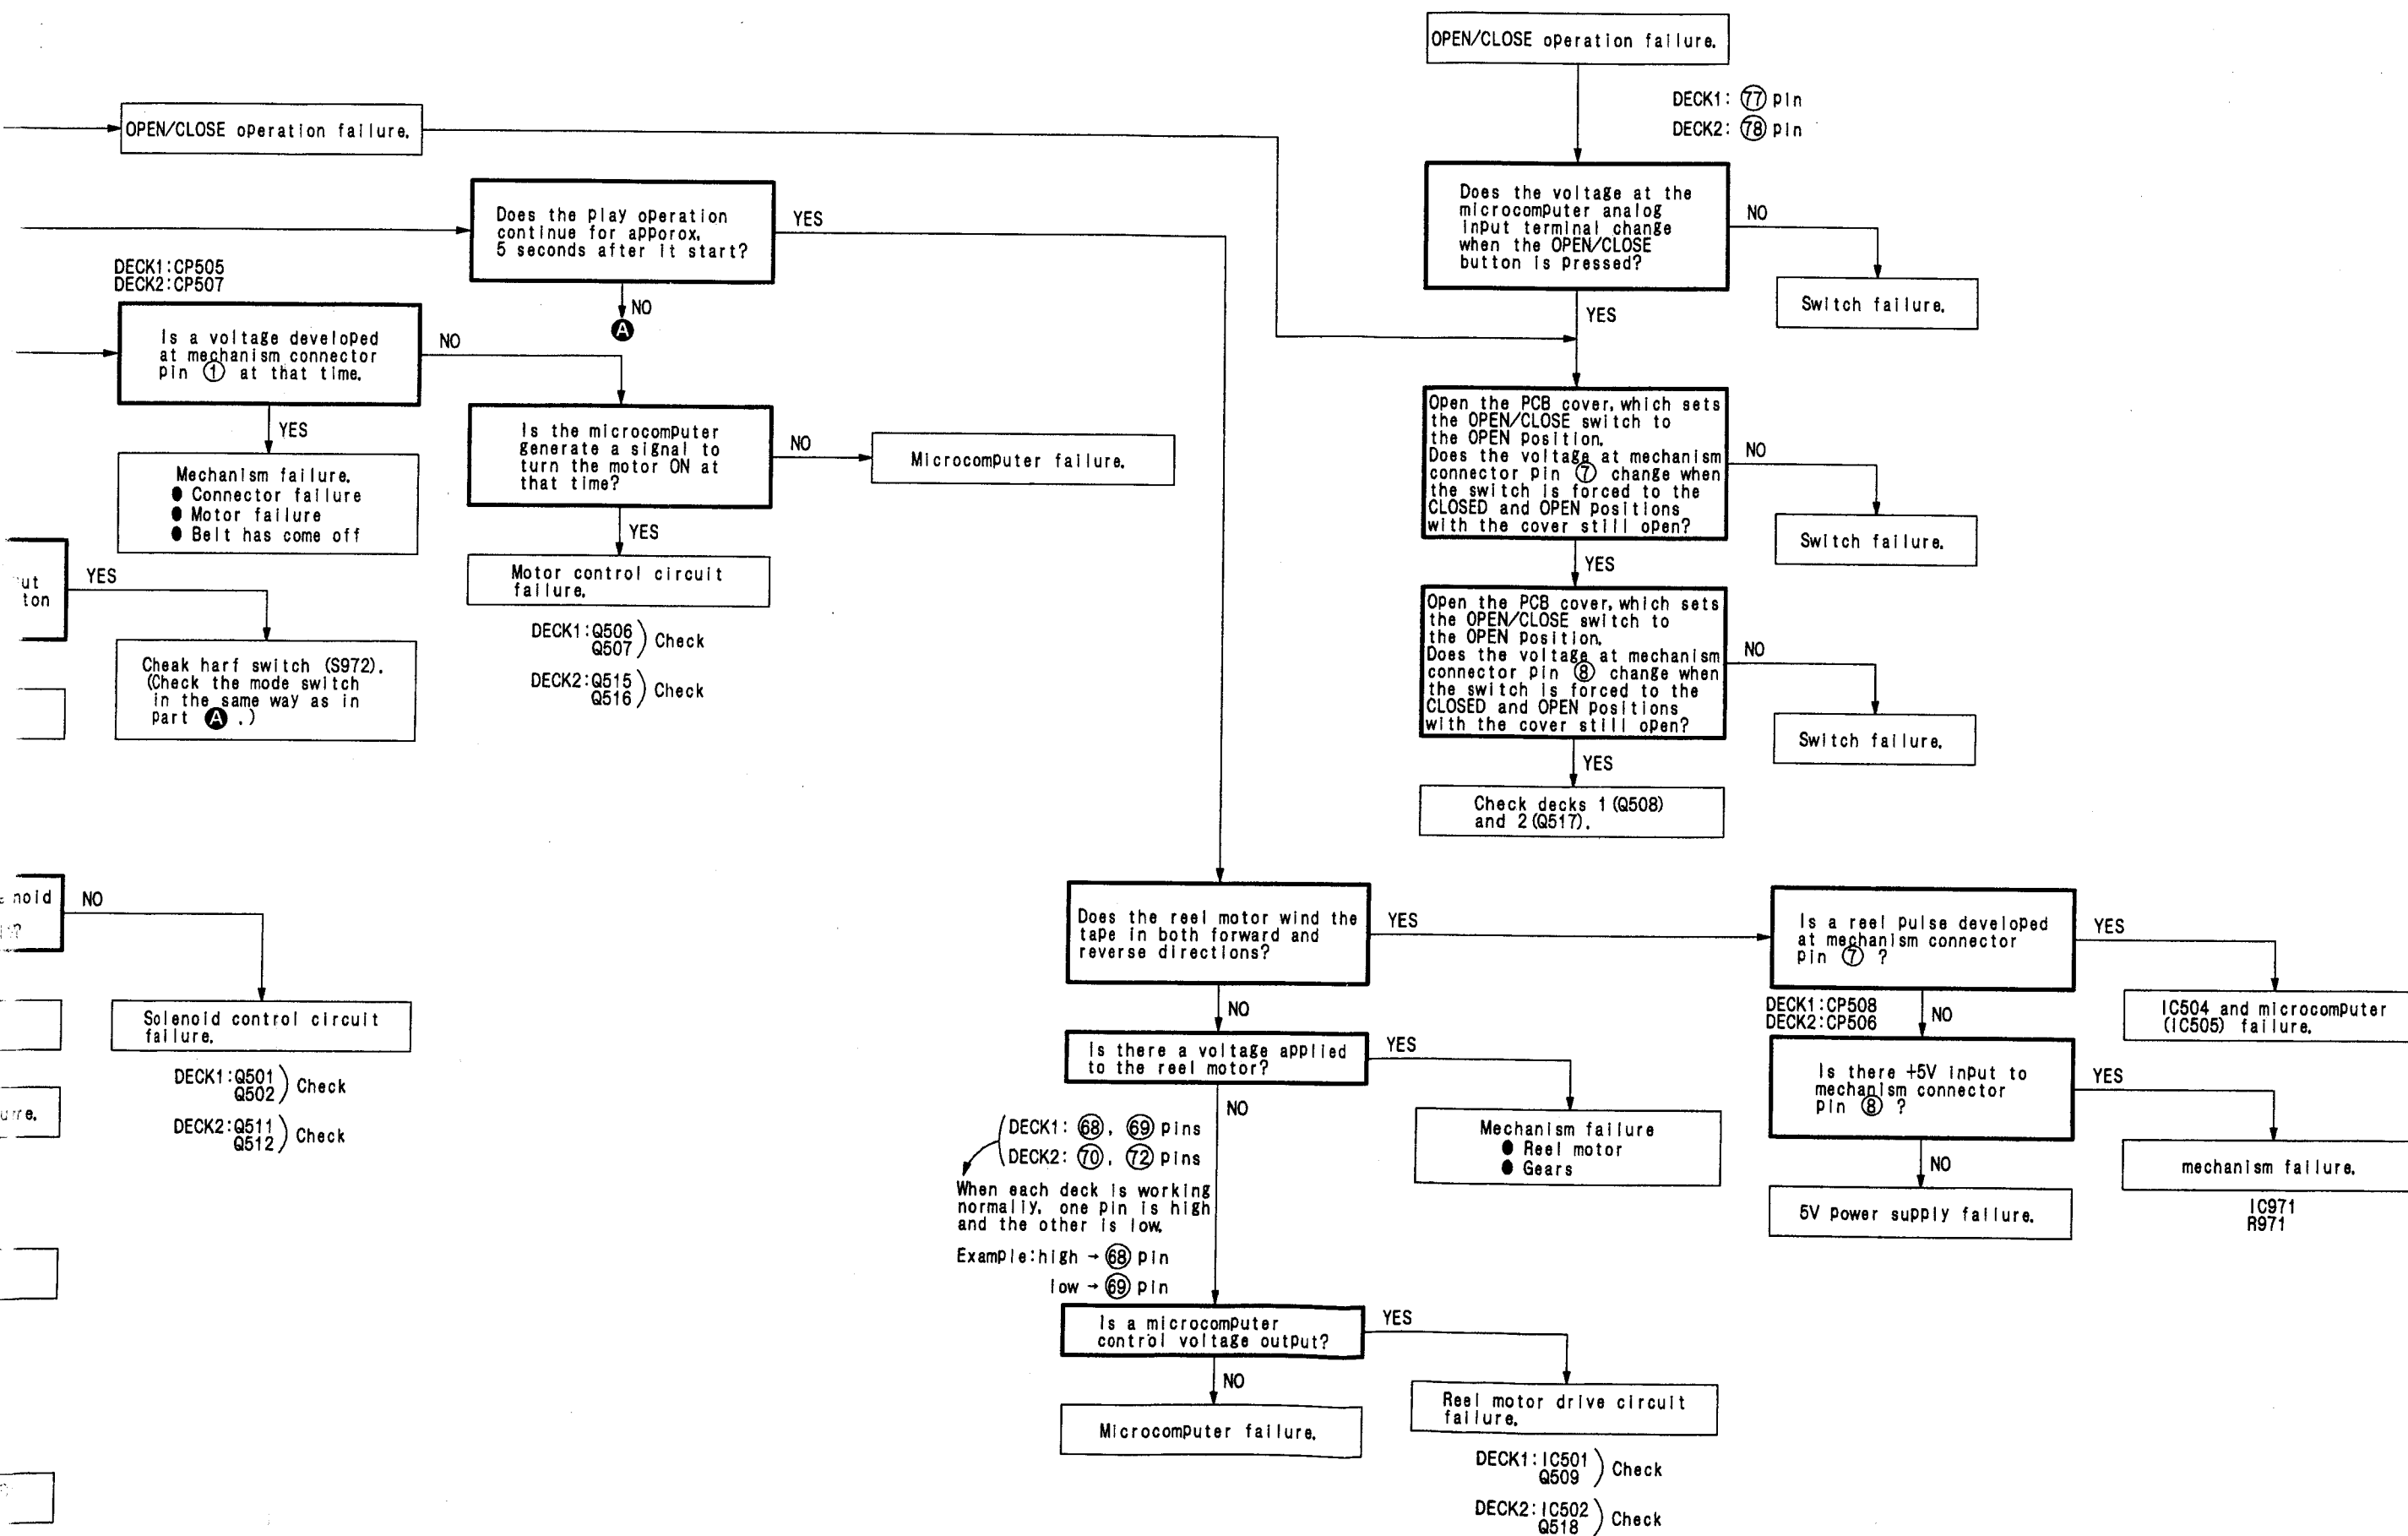

Fig. 10

■ TROUBLESHOOTING GUIDE

*To perform troubleshooting, set the unit to the state described in the "Motor Control PCB Checking Method" on page 11.

■ TERMINAL FUNCTION OF IC

• IC505 (M38172M4065F): MICROCOMPUTER

* To check the contents of the item "※" in the IC terminal table, set the unit to the state described in the "Motor Control PCB Checking Method" on page 11.

Pin No.	Mark	I/O Division	Function	Check point	※ Discription
1	RCH	I	Rch indication level input	Connector CP3 ② pin	0V with no signal and 1V with 0VU (-20dB) input in the REC or PAUSE mode. The voltage varies from 0 to 5V for different input levels.
2	BIAS	I	Bias adj. V.R input	Connector CP701 ③ pin	Bias ADJ. Vol. min..... 0V center..... 2.5V max..... 5V
3	MECHA1	I	Deck 1 leader tape det., mechanism switch	Connector CP502 ③ pin	(ex)  The waveform should vary with the type of tape and the tape speed of deck 1.
4	MECHA2	I	Deck 2 leader tape det., mechanism switch	Connector CP502 ④ pin	(ex)  The waveform should vary with the type of tape and the tape speed of deck 2.
5	SELA	O	Mecha. input selector signal output 1 (B) ON: "L", OFF: "H"	Connector CP502 ⑥ pin	
6	SELB	O	Mecha. input selector signal output 2 (A) ON: "L", OFF: "H"	Connector CP502 ⑤ pin	
7	RPT1	I	Deck 1 reel pulse det. input (take up side)	Connector CP502 ⑦ pin	 Changes within the 0 ↔ 5V range each time the take up reel on deck 1 is through approximately 30 degrees.
8	RPS1	I	Deck 1 reel pulse det. input (supply side)	Connector CP502 ⑧ pin	 Supply reel on deck 1
9	RPT2	I	Deck 2 reel pulse det. input (take up side)	Connector CP502 ⑨ pin	 Take up reel on deck 2
10	RPS2	I	Deck 2 reel pulse det. input (supply side)	Connector CP504 ① pin	 Supply reel on deck 2
11	HSPD1	I	Deck 1 high speed take up selector output	Connector CP504 ② pin	"H" (=5V) when deck 1 is in the high-speed FF/REW or TPS mode and "L" (=0V) in other modes.
12	HSPD2	I	Deck 2 high speed take up selector output	Connector CP504 ③ pin	"H" (=5V) when deck 2 is in the high-speed FF/REW or TPS mode and "L" (=0V) in other modes.

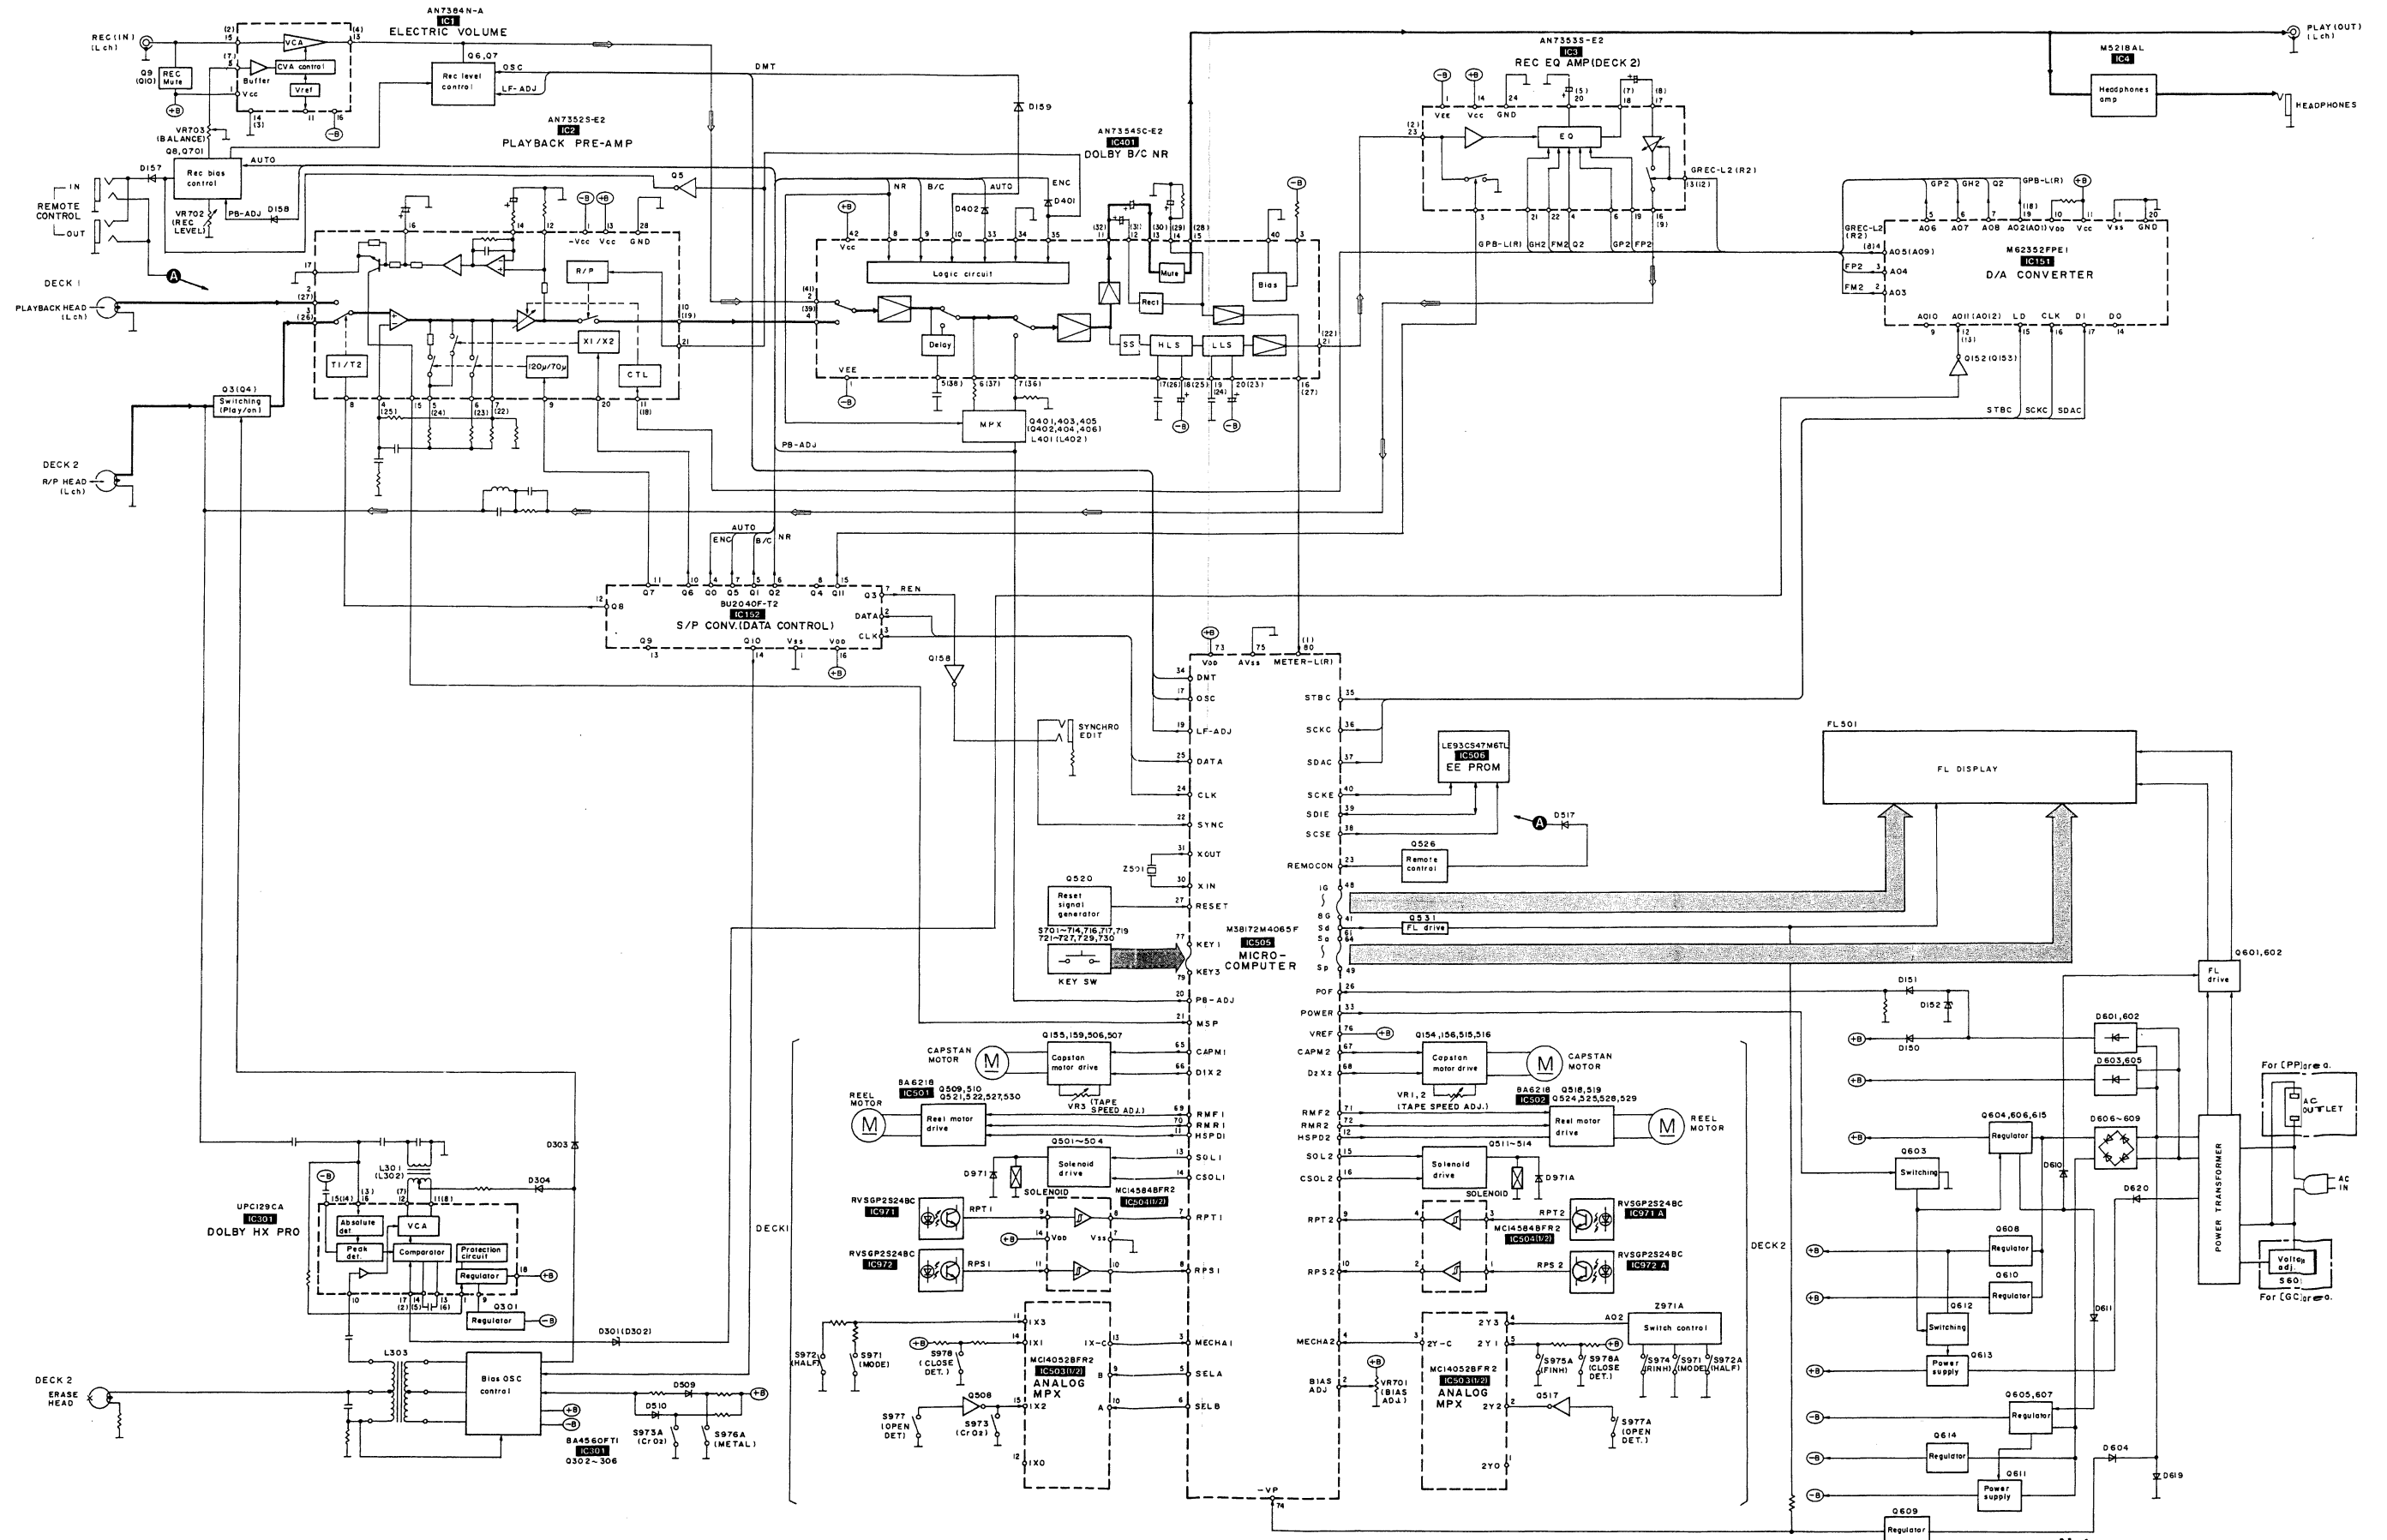

Pin No.	Mark	I/O Division	Function	Check point	※ Discription
13	SOL1	O	Deck 1 plunger trigger control output ON: "H", OFF: "L"	Connector CP504 ④ pin	"H" (=5V) for a period of a few tens to a few hundreds of milliseconds when deck 1 changes from stop mode to play mode and vice versa. When deck 1 changes from stop mode to FF/REW mode, this terminal generates "H" pulses twice for a period of a few tens to a few hundreds of milliseconds.
14	CSOL1	O	Deck 1 plunger keep control output ON: "H", OFF: "L"	Connector CP504 ⑤ pin	"H" (=5V) when deck 1 is in FF/REW mode.
15	SOL2	O	Deck 2 plunger trigger control output ON: "H", OFF: "L"	Connector CP504 ⑥ pin	Same as 13 above for deck 2.
16	CSOL2	O	Deck 2 plunger keep control output ON: "H", OFF: "L"	Connector CP504 ⑦ pin	Same as 14 above for deck 2.
17	OSC	O	Audio signal for adjustment output ON: "H", OFF: "L"	Connector CP3 ⑥ pin	Generates signals at approx. 400Hz, 10kHz and 3kHz (square wave (H and L, 0 and 5V) in REC mode during adjustment of ATC).
18	MODEL	I	Model selector input ON: "L", OFF: "H"	Connector CP5 ④ pin	5V
19	LFADJ	O	Low frequency rec. adj. output ON: "H", OFF: "L"	Connector CP3 ⑦ pin	Normally "L" (=0V) H and L are switched every 0.4s in the REC mode during adjustment of ATC. Becomes "H" (=5V) in level mode.
20	PBADJ	O	Playback adj. output ON: "H", OFF: "L"	Connector CP3 ⑧ pin	Used for adjustment at factory but in the finished product. Remains at "L" (=0V).
21	MSP	I	TPS signal det. input ON: "L", OFF: "H"	Connector CP3 ⑨ pin	TPS mode No program: "H" (=5V) Programs: "L" (=0V)
22	SYNC	I	CD syncro start signal input ON: "L", OFF: "H"	Connector CP6 ⑨ pin	"L" (=0V) via cable from CD at the start of CD sync; "H" in other modes.
23	REMOCON	I	Remocon signal input ON: "H", OFF: "L"	TRANSISTOR Q526 collector	H and L pulse waveform appears on the input of a remote control signal.
24	CLK	O	Serial clock for serial data output ON: "H", OFF: "L"	Connector CP3 ⑩ pin	 Constant pulse output
25	DATA	O	Serial data for amp control output ON: "H", OFF: "L"	Connector CP4 ① pin	 Data output in response to CLK above
26	POF	I	Power off det. input ON: "H", OFF: "L"	Connector CP4 ② pin	 Rectified waveform at both 50 and 60Hz (clamping at 5V)

Pin No.	Ma
27	RES
28	XCI
29	XCO
30	XIN
31	XOU
32	V _{ss}
33	POWER
34	DMT
35	STBC
36	SDAC
37	SCKC
38	STBE

Pin No.	Mark	I/O Division	Function	Check point	※ Discription
27	RESET	I	Reset input ON: "L", OFF: "H"	TRANSISTOR Q520 collector	 Usually H (=5V) but L for a period of a few to a few tens of milliseconds is first plugged in when the player
28	XCIN	I	Not used	—	
29	XCOUT	O	Not used	—	
30	XIN	I	Microcomputer clock OSC terminal	Z501 DECK 2 MECHA. side terminal	 Oscillator waveform at 6MHz
31	XOUT	O	Microcomputer clock OSC terminal	Z501 DECK 1 MECHA. side terminal	 Oscillator waveform at 6MHz
32	V _{ss}	—	Microcomputer GND	Connector CP5 ② pin	0V
33	POWER	O	Power control output ON: "H", OFF: "L"	Connector CP4 ③ pin	Power ON: "H" (=5V) Power OFF: "L" (=0V)
34	DMT	O	Line out mute signal output ON: "L", OFF: "H"	Connector CP4 ④ pin	"L" (=0V) when sound is being produced in the play or REC mode and "H" (=5V) when no sound is produced in the stop or FF/REW mode.
35	STBC	O	DA converter strove signal output ON: "H", OFF: "L"	Connector CP4 ⑤ pin	 Usually
36	SDAC	O	DA converter data output ON: "L", OFF: "H"	Connector CP4 ⑥ pin	 Usually
37	SCKC	O	DA converter serial clock output ON: "L", OFF: "H"	Connector CP4 ⑦ pin	 Usually
38	STBE	O	E2PROM strove signal output ON: "H", OFF: "L"	Connector CP707 ③ pin	 (ex...FOR ↔ REV PLAY mode is changed)

Pin No.	Mark	I/O Division	Function	Check point	※ Discription												
39	SE2P	I/O	E2PROM serial data input/output	Connector CP707 ② pin	5V 0  (ex...FOR ↔ REV PLAY mode is changed) Waveform appears in response to 38 above.

BLOCK DIAGRAM

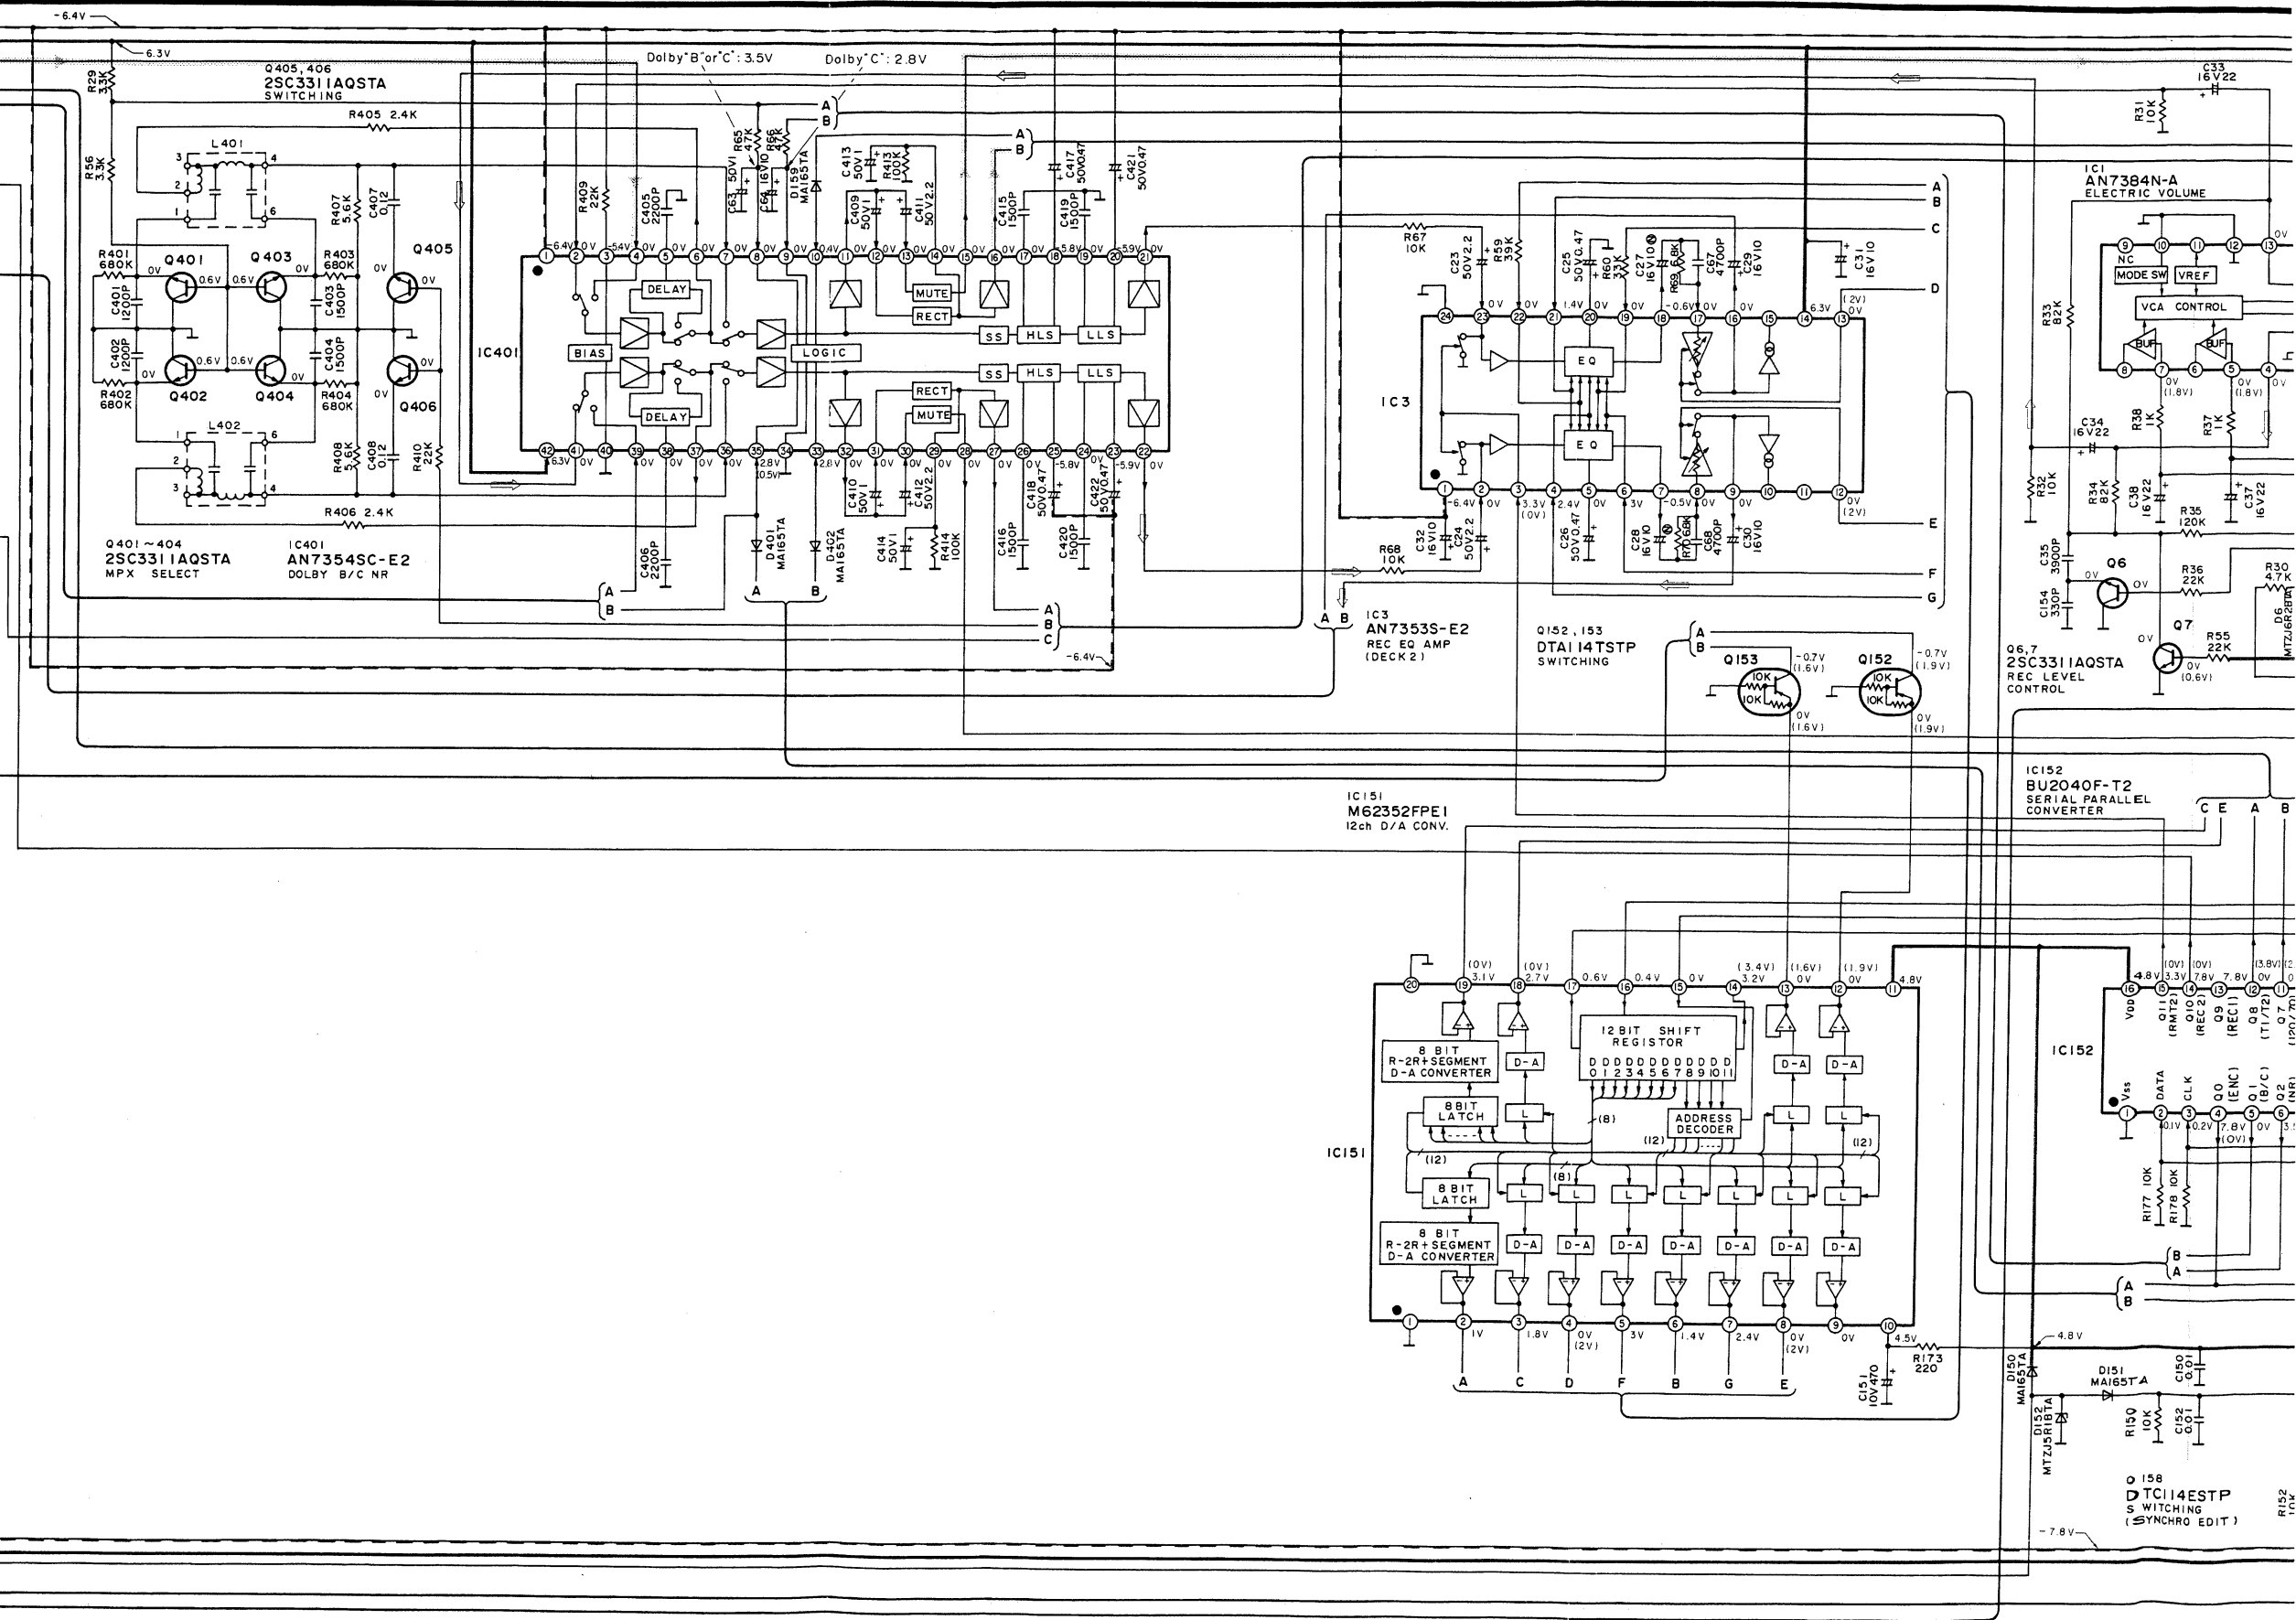

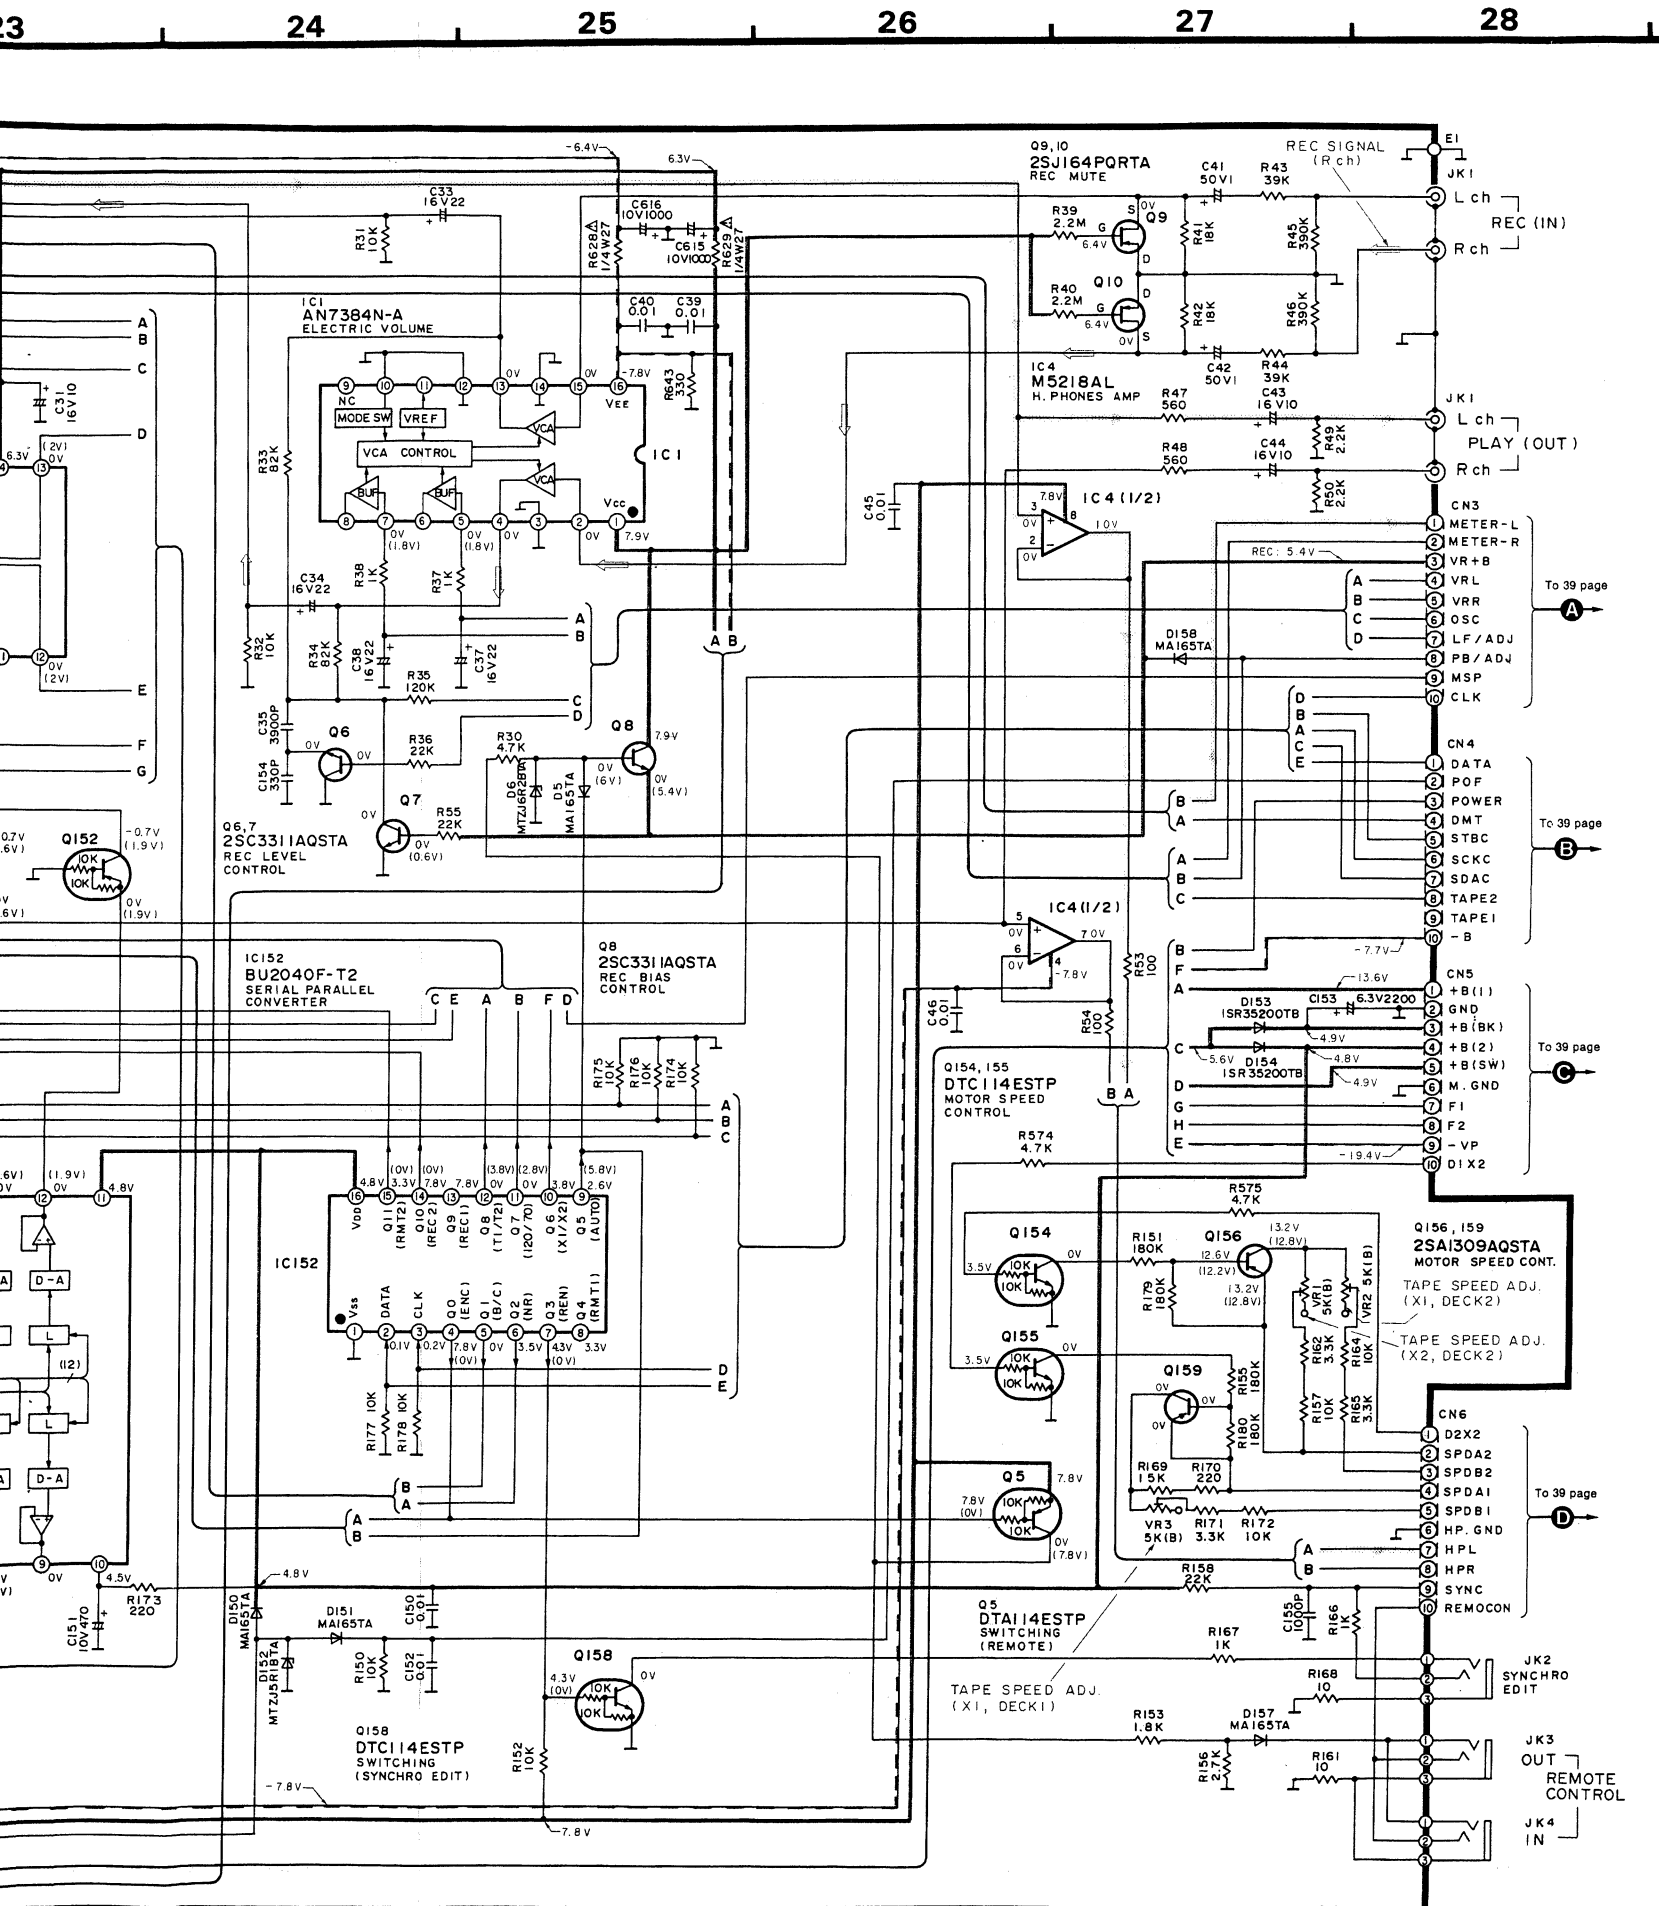

Notes:

- — Playback signal
- — Recording signal

SCHEMATIC DIAGRAM (Parts list on pages 59~63.)

(This schematic diagram may be modified at any time with the development of new technology.)

Note 1:

- S601: Voltage selector in "240V" position. (For [GC] area only.) (110V ↔ 127V ↔ 220V ↔ 240V)
- Resistance are in ohms (Ω), 1/4 watt unless specified otherwise.
1K=1,000 (Ω), 1M=1,000k (Ω)
- Capacity are in micro-farads (μF) unless specified otherwise.
- All voltage values shown in circuitry are under no signal condition and playback mode with volume control at minimum position otherwise specified.
()..... Voltage values at record mode.
- For measurement us EVM.
- Important safety notice
Components identified by Δ mark have special characteristics important for safety.
When replacing any of these components, use only manufacturer's specified parts.
- (—+B—) indicates +B (bias).
- (—B—) indicates -B (bias).
- (→) indicates the flow of the playback signal.
- (→) indicates the flow of the record signal.
- The supply part number is described alone in the replacement parts list,

Ref. No.	Production Part No.	Supply Part No.
IC1	AN7384N-A	AN7384
IC4	M5218AL	M5218L
IC302	BA4560FT1	SVIBA4560FT1

Caution!

- IC and LSI are sensitive to static electricity.
- Secondary trouble can be prevented by taking care during repair.
- Cover the parts boxes made of plastics with aluminum foil.
- Ground the soldering iron.
- Put a conductive mat on the work table.
- Do not touch the legs of IC or LSI with the fingers directly.

B POWER SUPPLY CIRCUIT For [EB,EG,GN] areas.

B POWER SUPPLY CIRCUIT For [GC] area.

Note 2:

- S701 : Synchro-start switch (SYNCHRO START).
- S702 : Tape-to-tape recording-speed switch (SPEED; X1, X2).
- S703 : Dolby noise reduction switch (Dorby NR; \square , \square).
- S704 : Reverse-mode selector switch (REVERSE MODE; \square , \square , \square).
- S705 : DECK 1 Fast-forward switch (\gg TPS).
- S706 : DECK 2 Fast-forward switch (\gg TPS).
- S707 : Power switch in "on" position (POWER/ \blacksquare standby ϕ \blacksquare ON).
- S708 : DECK 2 Stop switch (\blacksquare).
- S709 : DECK 1 Rewind switch (\ll TPS).
- S710 : DECK 2 Rewind switch (\ll TPS).
- S711 : DECK 1 Stop switch (\blacksquare).
- S712 : DECK 2 Forward-side playback switch (\triangleright).
- S713 : DECK 1 Forward-side playback switch (\triangleright).
- S714 : DECK 2 Reverse-side playback switch (\triangleleft).
- S716 : DECK 2 Record switch (\bullet REC).
- S717 : DECK 1 Reverse-side playback switch (\triangleleft).
- S719 : DECK 2 Pause switch (\blacksquare).
- S721 : DECK 2 Automatic-record-muting switch (\bullet AUTO REC MUTE).
- S722 : DECK 1 Open/close switch (\blacktriangle OPEN/CLOSE).
- S723 : DECK 2 Open/close switch (\blacktriangle OPEN/CLOSE).
- S724 : DECK 2 Tape counter mode 2 switch (COUNTER MODE 2).
- S725 : DECK 1 Tape counter mode 1 switch (COUNTER MODE 1).
- S726 : DECK 2 Tape counter reset 2 switch (COUNTER RESET 2).
- S727 : DECK 1 Tape counter reset 1 switch (COUNTER RESET 1).
- S729 : DECK 2 ATC switch (ATC).
- S730 : Timer switch (\square TIMER).
- S971 : DECK 1 Mode switch in "off" position.
- S971A : DECK 2 Mode switch in "off" position.
- S972 : DECK 1 Cassette half detection switch in "off" position.
- S972A : DECK 2 Cassette half detection switch in "off" position.
- S973 : DECK 1 ATS (CrO₂) switch in "off" position.
- S973A : DECK 2 ATS (CrO₂) switch in "off" position.
- S974A : DECK 2 Reverse rec. inhibit switch in "off" position.
- S975A : DECK 2 Forward rec. inhibit switch in "off" position.
- S976A : DECK 2 ATS (Metal) switch in "off" position.
- S977 : DECK 1 Cassette holder open detection switch.
- S977A : DECK 2 Cassette holder open detection switch.
- S978 : DECK 1 Cassette holder close detection switch.
- S978A : DECK 2 Cassette holder close detection switch.

Resistance are in ohms (Ω), 1/4 watt unless specified otherwise. 1K=1,000 (Ω), 1M=1,000k (Ω)
 Capacity are in micro-farads (μ F) unless specified otherwise.
 All voltage values shown in circuitry are under no signal condition and playback mode with volume control at minimum position otherwise specified.

()..... Voltage values at record mode.

For measurement us EVM.

Important safety notice

Components identified by Δ mark have special characteristics important for safety.
 When replacing any of these components, use only manufacturer's specified parts.

- (\triangleleft +B \triangleright) indicates +B (bias).
- (\triangleleft -B \triangleright) indicates -B (bias).
- (\rightarrow) indicates the flow of the playback signal.
- (\rightarrow) indicates the flow of the record signal.

* Caution!

IC and LSI are sensitive to static electricity.

Secondary trouble can be prevented by taking care during repair.

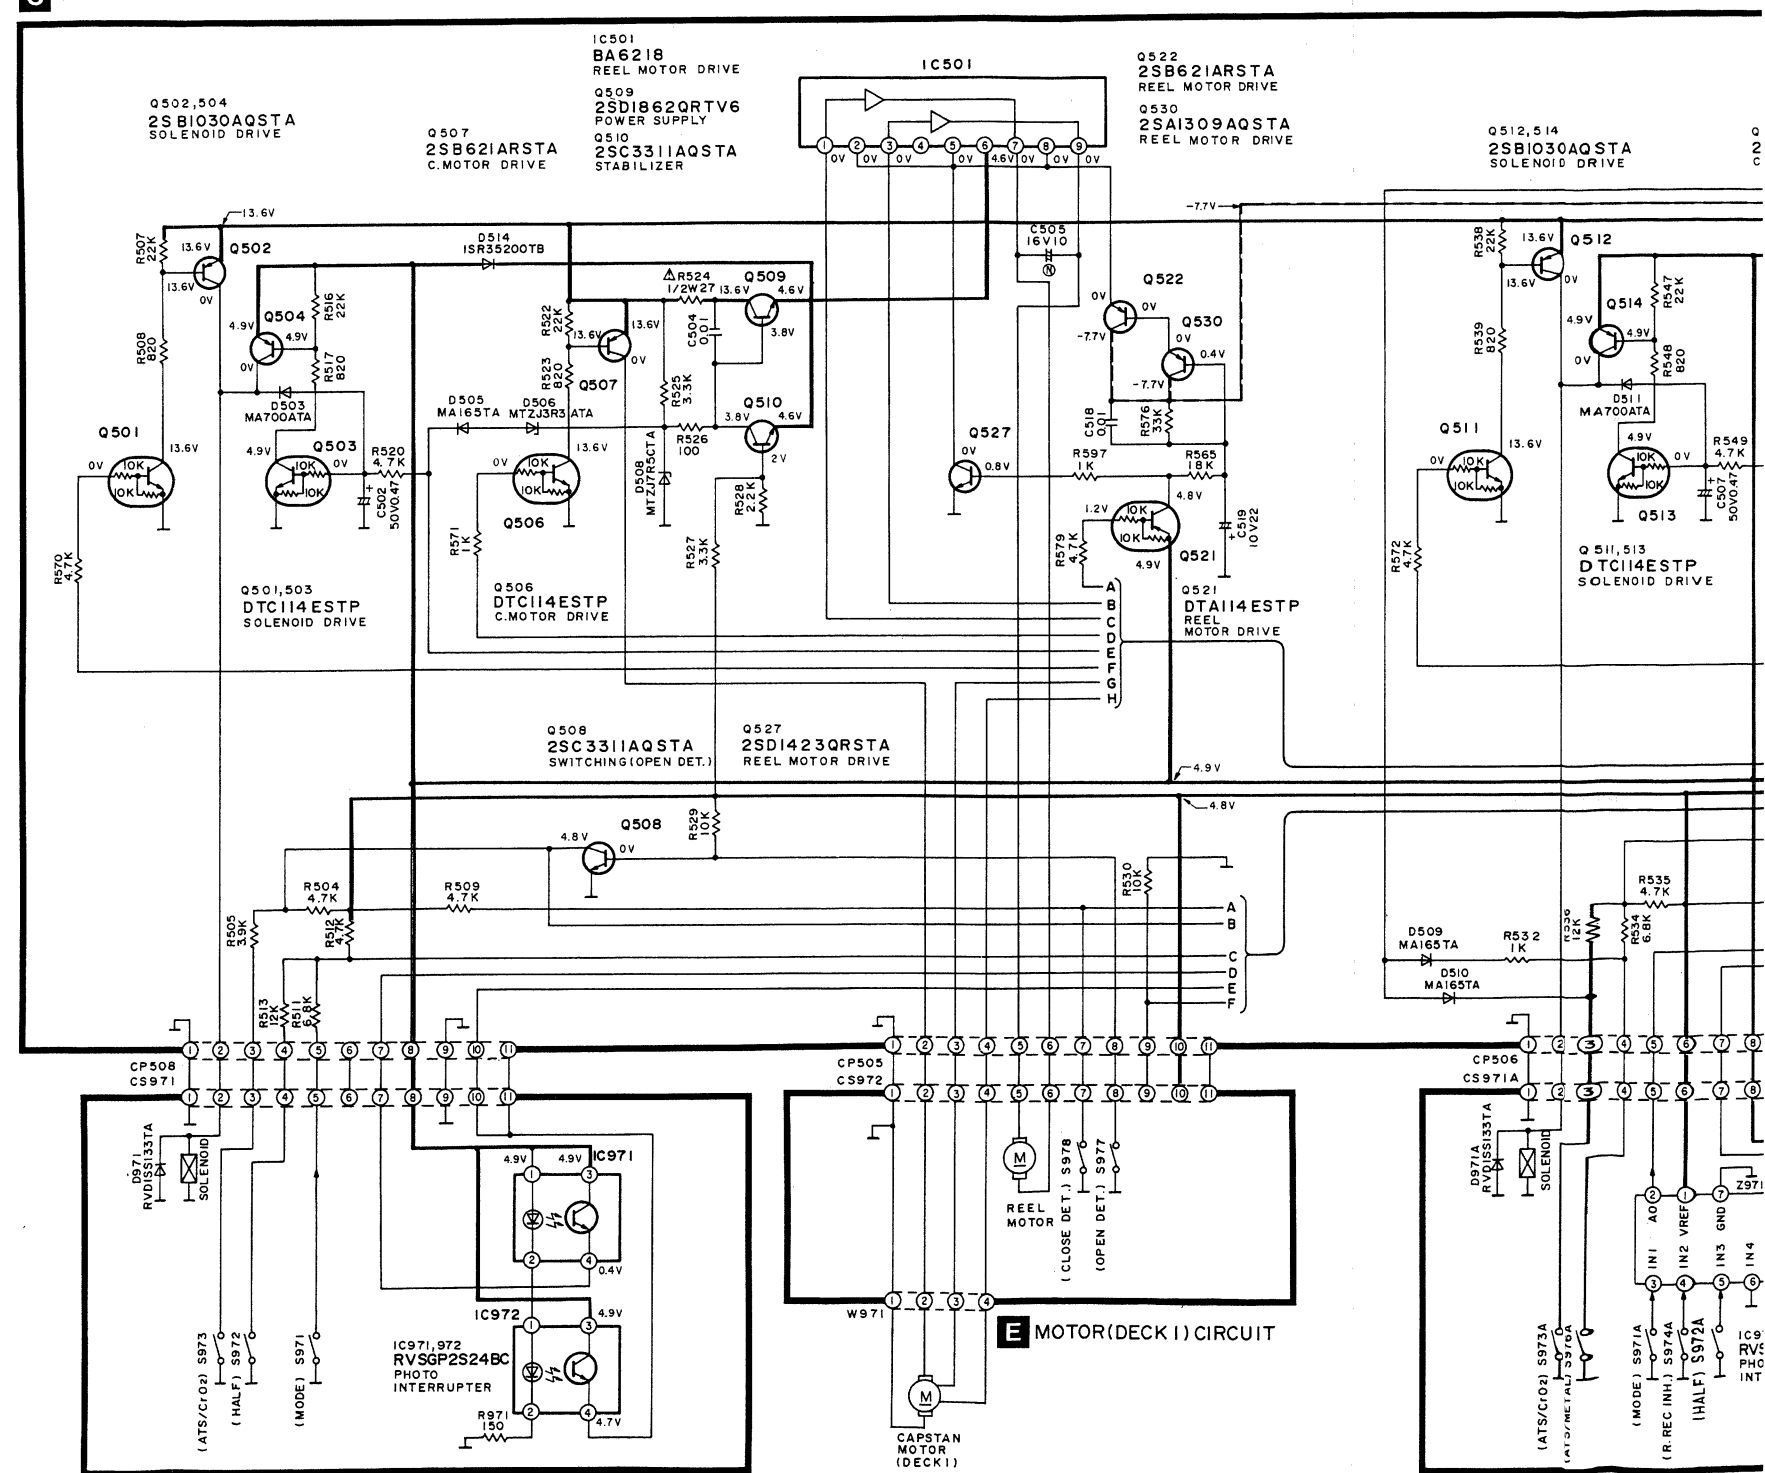

*Cover the parts boxes made of plastics with aluminum foil.

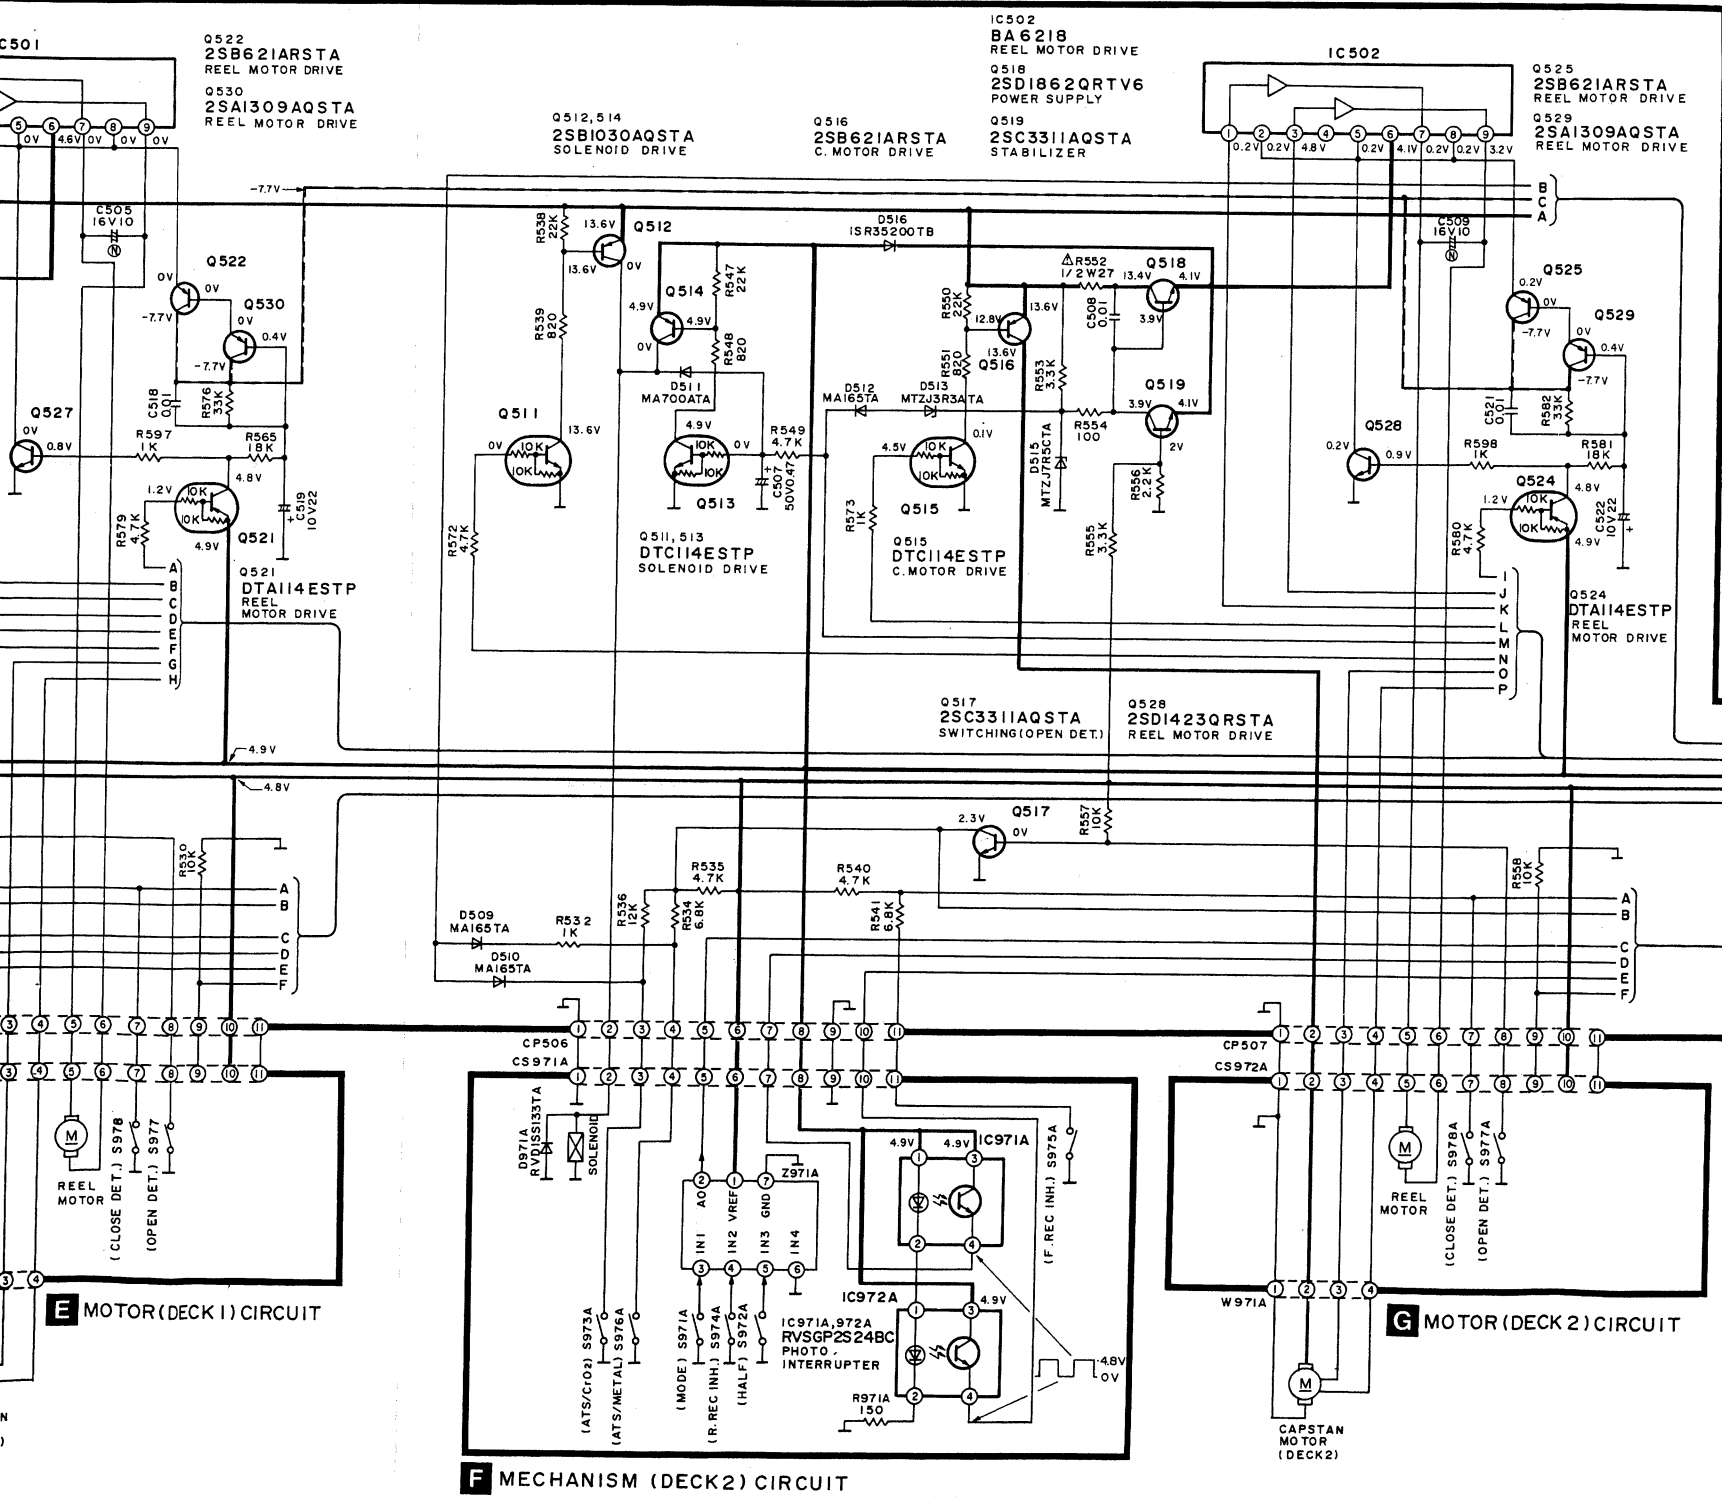

*Ground the soldering iron.

*Put a conductive mat on the work table.

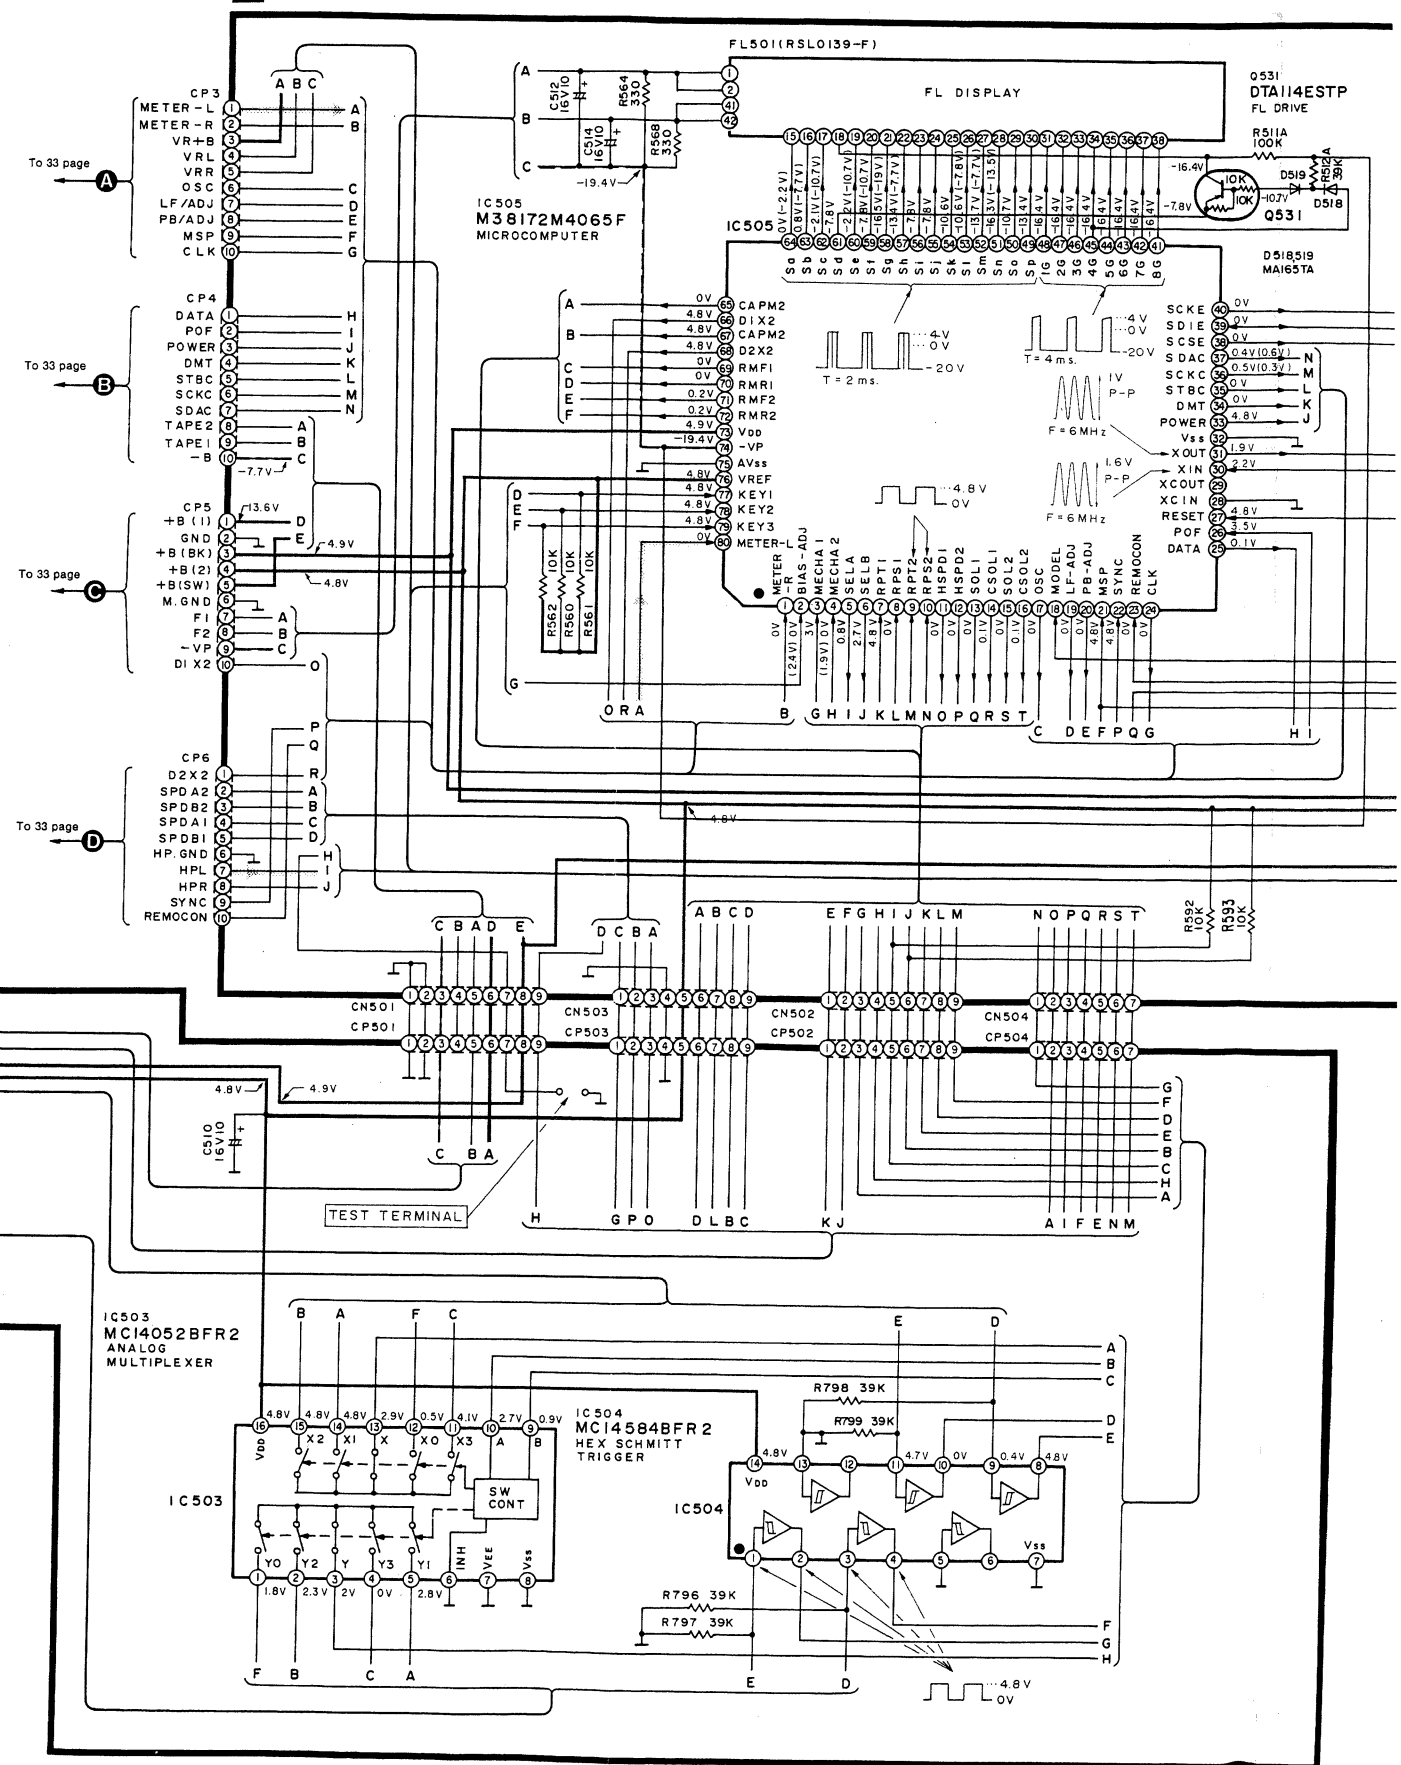

*Do not touch the legs of IC or LSI with the fingers directly.

REPLACEMENT PARTS LIST

Notes: *Important safety notice:
Components identified by Δ mark have special characteristics important for safety.
Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used.
When replacing any of components, be sure to use only manufacturer's specified parts shown in the parts list.
*The parenthesized indications in the Remarks columns specify the areas. (Refer to the cover page for area.)
Parts without these indications can be used for all areas.

Notes: *Important safety notice:Components identified by Δ mark have special characteristics important for safety.

Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used.

When replacing any of components, be sure to use only manufacturer's specified parts shown in the parts list.

*The parenthesized indications in the Remarks columns specify the areas. (Refer to the cover page for area.)

Parts without these indications can be used for all areas.

Service Manual

Cassette Deck

RS-TR777

Supplement

Dolby NR-Equipped
Stereo Double Cassette Deck

Colour

(K) ... Black Type

* Dolby noise reduction and HX Pro headroom extension manufactured under license from Dolby Laboratories Licensing Corporation. HX Pro originated by Bang and Olufsen. "DOLBY", the double-D symbol and "HX PRO" are trademarks of Dolby Laboratories Licensing Corporation.

Area

Suffix for Model No.	Area	Colour
(PP)	U.S.A./Canada.	(K)
(EB)	Great Britain.	
(EG)	Germany, Italy and Europe.	
(GC)	Asia, Latin America, Middle Near East and Africa.	
(GN)	Oceania.	

Please file and use this supplement manual together with the service manual for Model No. RS-TR777, Order No. AD9301002C0.

Note: This supplement is intended to provide additional information or corrections to the existing service manual for Model No. RS-TR777. Be sure to update your service manual for future reference.

CHANGES

CHANGE IN REPLACEMENT PARTS LIST (on pages 61, 63.)

Note: • Important safety notice:

Components identified by Δ mark have special characteristics important for safety. Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used.

When replacing any of components, be sure to use only manufacturer's specified parts shown in the parts list.

Parts Change Notice

Model No. RS-TR979 (EB, EG, GC, PP)/RS-TR777 (PP, EB, EG, GC, GN)/RS-CA1060 (E)/
RS-CH510 (E)/RS-TR575 (P, PC, E, EB, EG, GC, GN)/SA-LS10 (EB, EG, Ei)/
RS-BX501 (E, EB, EG), (EP)

Please revise the original parts list in the Service Manual to conform to the change (s) shown below. If new part numbers are shown, be sure to use them when ordering parts.

Reason for Change		*The circled item indicates the reason. If no marking, see the Notes in the bottom column.	
1.	Improve performance		
2.	Change of material or dimension		
3.	To meet approved specification		
4.	Standardization		
5.	Addition		
6.	Deletion		
⑦.	Correction		
8.	Other		

Interchangeability Code		**The circled item Indicates the interchangeability. If no marking, see the Notes in the bottom column.	
Parts	Unit Production		
A	Original → Early New → Late		Original or new parts may be used in either early or late production units. Use original parts until the supply is exhausted, then stock new parts.
B	Original → Early New → Late		Original parts may be used in early production units only. New parts may be used in either or late production units. Use original parts where possible, then stock new parts.
③	Original → Early New → Late		New parts are to be used in both early and late production units. Stock new parts only.
D	Original → Early New → Late		Original parts must be used in early production units. New parts must be used in late production units only. Stock both original and new parts.
E	Other
